The Strongest Magnetic Fields in the Universe Vasily S. Beskin, A. Balogh, Maurizio Falanga, Maxim Lyutikov, Sandro Mereghetti, Tsvi Piran, R.A. Treumann, 2016-01-29 This volume extends the ISSI series on magnetic fields in the Universe into the domain of what are by far the strongest fields in the Universe and stronger than any field that could be produced on Earth The chapters describe the magnetic fields in non degenerate strongly magnetized stars in degenerate stars such as white dwarfs and neutron stars exotic members called magnetars and in their environments as well as magnetic fields in the environments of black holes These strong fields have a profound effect on the behavior of matter visible in particular in highly variable processes like radiation in all known wavelengths including Gamma Ray bursts The generation and structure of such strong magnetic fields and effects on the environment are also described

Investigating the A-Type Stars Using Kepler Data Simon J. Murphy, 2014-09-20 Simon Murphy s thesis has significant impact on the wide use of the revolutionary Kepler Mission data leading to a new understanding in stellar astrophysics It first provides a deep characterisation and comparison of the Kepler long cadence and short cadence data with particular insight into the Kepler reduction pipeline It then brings together modern reviews of rotation and peculiarities in A type stars and their relationship with the pulsating delta Scuti stars This is the first combined review of these subjects since the classic monograph by Sydney Wolff The A stars was published three decades ago The thesis presents a novel technique Super Nyquist Asteroseismology that has opened up the asteroseismic study of thousands of Kepler stars It shows case studies of delta Scuti stars examining amplitude growth super Nyquist pulsation and pulsation in a high amplitude population II SX Phoenicis star in a 343 d binary This work informs our understanding of the relation of rotation to peculiarity hence has applications to atomic diffusion theory This is a brilliant thesis written in an elegant and engaging style

Destiny Or Chance Revisited Stuart Ross Taylor, 2012-09-27 This exciting tour of our Universe explores our current knowledge of exoplanets and the search for another Earth like planet Beginning with the basic concepts of planet formation and the composition of the Universe Stuart Ross Taylor summarises our knowledge of exoplanets how they compare with our planets and why some stars have better habitable zones Further sections provide a detailed study of our Solar System as a basis for understanding exoplanetary systems and a detailed study of the Earth as our only current example of a habitable planet The book concludes with a philosophical and historical discussion of topics surrounding planets and the development of life including why our chances of finding aliens on exoplanets is very low This is an engaging and informative read for anyone interested in planetary formation and the exploration of our Universe

Astronomy and Astrophysics S. Joardar, A. B. Bhattacharya, R. Bhattacharya, 2008-04-15 This book is designed for upper division courses in astronomy and as a reference for science professionals The subject areas of astronomy and astrophysics have grown tremendously during the last few decades New developments in radio astronomy and recent data retrieved from NASA's Hubble Space Telescope have resulted in many discoveries and created new interest in the study of the universe Using four color throughout Astronomy Astrophysics describes the different techniques and instruments employed in the study of the universe and the results obtained with discussion on both theory and observation The book

covers topics such as minor planets radio astronomy astronomical telescopes measurement of solar brightness distribution black holes and the Einstein effect A CD ROM with color figures and simulations accompanies the book *Solar and Stellar Flares* Bernhard M. Sherwood, L. Plaut, 1975-07-31 Proceedings of IAU Symposium No 67 held in Moscow U S S R July 29 August 4 1974 Exoplanets Sara Seager, 2011-01-15 For the first time in human history we know for certain the existence of planets around other stars Now the fastest growing field in space science the time is right for this fundamental source book on the topic which will lay the foundation for its continued growth Exoplanets serves as both an introduction for the non specialist and a foundation for the techniques and equations used in exoplanet observation by those dedicated to the field **Host Stars and their Effects on Exoplanet Atmospheres** Jeffrey Linsky, 2025-01-29 This comprehensive introductory overview describes the emission of radiation X rays to radio and the winds of host stars and how they control the past present and future evolution of an exoplanet The book focuses on topics that are critically important for understanding exoplanet atmospheres but are often posed without a comprehensive and detailed understanding of the host star and its effects on the exoplanet Although both stars and exoplanets are usually studied in isolation in this book they are treated as an integrated system Whether or not an exoplanet can retain its atmosphere and the chemical composition of the atmosphere depends critically on the strength time dependence and spectral energy distribution of the host star's radiation flares coronal mass ejections and wind which are described in detail in the book The book describes the roles played by magnetic fields in the coronae and chromospheres of host stars that tie together stellar active phenomena with major effects on exoplanet atmospheres In the era of JWST and very sensitive ground and space based instruments a critical topic is the noise imposed

on radial velocity measurements and transit photometry and spectroscopy by the host star's activity and variability that fundamentally limit our understanding of exoplanet properties. This topic is addressed in detail in the book. This book is written primarily for graduate students and researchers who are studying exoplanet atmospheres and habitability but who may not have a background in the physics and phenomenology of host stars. The book could serve as a reference book for graduate level classes on exoplanets. Nonspecialists with a scientific background should also find this text a valuable resource for understanding the critical issues of contemporary exoplanet research. This new edition of *Host Stars and their Effects on Exoplanet Atmospheres* is a major revision of the existing book in the following ways. It includes a new discussion of how stellar noise fundamentally limits our understanding of exoplanet atmospheres. It demonstrates in detail how stellar activity acts as a fundamental driver of exoplanet atmosphere evolution. It provides an outlook on how the field of exoplanet atmospheres and bio astrophysics is being driven by powerful new telescopes and instruments. It extensively updates many chapters in particular concerning host star extreme and far ultraviolet emission, stellar winds, stellar surface structures, the effects of space weather on exoplanets, and provides a realistic evaluation of habitability taking into account the evolution of host star activity.
