**The Early Universe and Observational Cosmology** Nora Bretón, Jorge L. Cervantes-Cota, Marcelo Salgado, 2004-05-14 Spectacular experimental advances in observational cosmology have helped raise cosmology to the status of a genuine science and it is now possible to test many speculative theoretical issues and to obtain reliable values for the key parameters defining our observable universe This book has emerged from selected lectures given at the Mexican School on Gravitation and Mathematical Physics by leaders in their field Conceived as both a broad survey and as topical coverage of the latest developments it will benefit graduate students and newcomers to this field and provide researchers in the field with a modern source of reference

*Simulations of Dark Energy Cosmologies* Elise Jennings, 2012-05-27 A major outstanding problem in physics is understanding the nature of the dark energy that is driving the accelerating expansion of the Universe This thesis makes a significant contribution by demonstrating for the first time using state of the art computer simulations that the interpretation of future galaxy survey measurements is far more subtle than is widely assumed and that a major revision to our models of these effects is urgently needed The work contained in the thesis was used by the WiggleZ dark energy survey to measure the growth rate of cosmic structure in 2011 and had a direct impact on the design of the surveys to be conducted by the European Space Agency's Euclid mission a 650 million euro project to measure dark energy

*The Physics of the Early Universe* Eleftherios Papantonopoulos, 2005-01-07 The Physics of the Early Universe is an edited and expanded version of the lectures given at a recent summer school of the same name Its aim is to present an advanced multi authored textbook that meets the needs of both postgraduate students and young researchers interested in or already working on problems in cosmology and general relativity with emphasis on the early universe A particularly strong feature of the present work is the constructive critical approach to the present mainstream theories the careful assessment of some alternative approaches and the overall balance between theoretical and observational considerations As such this book will also benefit experienced scientists and nonspecialists from related areas of research

*Introduction to Cosmic Inflation and Dark Energy* Konstantinos Dimopoulos, 2020-11-24 Cosmic inflation and dark energy hold the key to the origin and the eventual fate of the Universe Despite the increasing prominence of these subjects in research and teaching over the past decade or more no introductory textbook dedicated to these topics has been previously published Dr Konstantinos Dimopoulos is a highly regarded expert in the field and an experienced communicator of the subject to students In this book he provides advanced undergraduate and early graduate students with an accessible introduction and equips them with the tools they need to understand the cosmology of cosmic inflation and dark energy Features Provides a concise pedagogical crash course in big bang cosmology focusing on the dynamics and the history of the Universe with an emphasis on the role of dark energy Chapters contain questions and problems for readers to test their understanding The first book to make cosmic inflation and dark energy accessible to students

**Particle Physics and the Universe** Claes Fransson, 2001 It is generally

felt in the cosmology and particle astrophysics community that we have just entered an era which later can only be looked back upon as a golden age Thanks to the rapid technical development with powerful new telescopes and other detectors taken into operation at an impressive rate and the accompanying advancement of theoretical ideas the picture of the past present and future Universe is getting ever clearer Some of the most exciting new findings and expected future developments are discussed in this invaluable volume The topics covered include the physics of the early Universe and ultra high energy processes Emphasis is also put on neutrino physics and astrophysics with the evidence for non zero neutrino masses emerging from both solar neutrinos and atmospheric neutrinos covered in great depth Another field with interesting new results concerns the basic cosmological parameters where both traditional methods and the potential of new ones like deep supernova surveys and acoustic peak detections in the cosmic microwave background are thoroughly discussed Various aspects of the dark matter problem such as gravitational lensing estimates of galaxy masses cluster evolution and hot cluster electron distortions of the thermal microwave background spectrum are also discussed as are particle physics candidates of dark matter and methods to detect them Cosmic rays of matter and antimatter are included as a topic and so is the problem of the enigmatic dark energy of the vacuum Contents Cosmology with Clusters of Galaxies N A Bahcall Radiochemical Solar Neutrino Experiments and Implications T A Kirsten Evidence for Neutrino Oscillation Observed in Super Kamiokande Y Totsuka High Energy Cosmic Neutrinos S W Barwick Discovery of the Cosmic Microwave Background D T Wilkinson Starlight in the Universe P Madau Acceleration of Ultra High Energy Cosmic Rays R D Blandford Dark Matter and Dark Energy in the Universe M S Turner Dark Matter Tomography J A Tyson Status of Models for Gamma Ray Bursts M J Rees and other papers Readership High energy physicists astrophysicists and cosmologists
