**International Environmental Economics** Günther G. Schulze,Heinrich W. Ursprung,2001 Environmental economics has traditionally been conducted in a closed economy mode Most textbooks on the subject still reflect this restriction international aspects of environmental problems are often not covered at all or dealt with as an afterthought In a world in which many environmental pollutants spill over national borders and national economies have become increasingly integrated this state of affairs is clearly unsatisfactory rational environmental policies undertaken in a globalizing world need to take the international economic and environmental relationships into consideration This perception has given rise to much literature employing an open economy approach to analysing environmental problems and policies After a decade of intensive research the time has come to take stock of the state of the art knowledge It is the objective of this volume to provide a review which will be of interest to scholars and graduate students of economics and political science who wish to familiarize themselves with the main issues and actors in the field of international environmental economics This collection of non technical issue oriented and comprehensive surveys is written by leading specialists in international and environmental economics *International Environmental Agreements on Climate Change* Carlo Carraro,2013-06-29 Climate change is one of the major environmental

concern of many countries in the world Negotiations to control potential climate changes have been taking place from Rio to Kyoto for the last five years There is a widespread consciousness that the risk of incurring in relevant economic and environmental losses due to climate change is high Scientific analyses have become more and more precise on the likely impacts of climate change According to the Second Assessment Report of the Intergovernmental Panel on Climate Change current trends in greenhouse gases GHGs emissions may indeed cause the average global temperature to increase by 1.3 to 5.8°C over the next 100 years As a result sea levels are expected to rise by 15 to 95 cm and climate zones to shift towards the poles by 150 to 550 km in mid latitudes In order to mitigate the adverse effects of climate change the IPCC report concludes that a stabilization of atmospheric concentration of carbon dioxide one of the major GHGs at 550 parts per million by volume ppmv is recommended This would imply a reduction of global emissions of about 50 per cent with respect to current levels In this context countries are negotiating to achieve a world wide agreement on GHGs emissions control in order to stabilize climate changes Despite the agreement on targets achieved in Kyoto many issues still remain unresolved

The Making of International Environmental Treaties Gerry Nagtzaam, 2009 Gerry Nagtzaam contends that in recent decades neoliberal institutionalist scholarship on global environmental regimes has burgeoned as has constructivist scholarship on the key role played by norms in international politics In this innovative volume the author sets these interest and norm based approaches against each other in order to test their ability to illustrate why and how different environmental norms take hold in some regimes and not others The book explores why some global environmental treaties seek to preserve and protect some parts of nature from human utilization some seek to conserve certain parts of nature for human development whilst others allow the reckless exploitation of nature without accounting for the consequences It tracks the fate of these three underlying environmental norms preservation conservation and exploitation using case studies on whaling mining in Antarctica and tropical timber The book illustrates how international political battles to shape environmental regimes inevitably result in clashes between these competing environmental norms This unique study will prove a fascinating read for both academics and practitioners in the fields of international environmental politics and international environmental law

Voluntary Environmental Agreements Patrick ten Brink, 2017-08-25 Voluntary environmental agreements VEAs generally agreements between government and business have been regarded by many as a key new instrument for meeting environmental objectives in a flexible manner Their performance to date has however also led to considerable criticism with several parties arguing that they are methods for avoiding real action that goes beyond business as usual Is either of these positions justified The aim of this book is to highlight and learn the lessons from existing experience looking not just at results but also at specific elements of agreements and also at the process of the agreement itself Lessons are drawn from experience from across the world covering the full range of environmental challenges and from the perspective of key stakeholder groups Importantly the book also presents tools for assessing and improving existing agreements and includes recommendations and

guidelines for future agreements in key areas such as climate change. It also deals at length with the problem of how such agreements might be used in developing and transitional economies. The overall view of the book is that there is a real potential for the future use of VEAs as part of the policy mix and as a tool for sharing the responsibility for meeting environmental objectives. For the agreements to play this role, however, significant steps are needed to ensure that they are effective, efficient, equitable, and appropriately linked to a portfolio of other instruments. The book is divided into four sections. First, existing agreements, their development, and efficacy are considered. Second, the prospects for voluntary agreements in developing and transitional economies are discussed. Third, a range of authors examine the role of VEAs as part of the policy mix to combat climate change, and finally, the book concludes with an examination of how new tools for evaluating and improving VEAs could be utilized in the future. Voluntary Environmental Agreements will be of interest not only to academics, governments, and businesses wishing to understand this specific instrument but also to those already implementing or considering applying VEAs to meet their environmental objectives.

*Designing International Environmental Agreements*  
Carsten Schmidt, 2000. It is not always easy to be famous. And for a famous, beautiful, princesslike Diana, life was certainly very difficult at times. She was just twenty years old when she married Prince Charles, and from that moment, millions of people around the world watched every move she made. And so did the photographers who followed her everywhere, even on that terrible night in Paris when Diana's young life ended.

Environmental Regulations and Standard Setting  
Bhaskar Nath, 2009-12-14. Environmental Regulations and Standard Setting is a component of the Encyclopedia of Environmental and Ecological Sciences, Engineering and Technology Resources in the global Encyclopedia of Life Support Systems (EOLSS), which is an integrated compendium of twenty-one Encyclopedias. Environmental regulation and the setting of environmental standards is concerned with command and control standards and regulations to control most of the pollutants generated by anthropogenic activities impacting on the three main environmental compartments: air, water, and land, including waste. Methods of regulatory control are described along with all major associated issues, including criteria for standard setting, enforcement of standards, public participation, and the deficiencies of conventional standards and regulations in securing the sustainability of Earth's natural environmental capital. The Theme is organized into four different topics which represent the main scientific areas of the theme. The first topic, the need for environmental regulation and standards, problems encountered in setting standards, and the major deficiencies of environmental standards vis-à-vis environmental sustainability are discussed in this topic. The succeeding two topics are Environmental Quality Standards and Source Oriented Control of Pollution. The fourth topic, the two prevailing types of standards, are discussed: ecologically based standards whose main purpose is to limit the degradation caused to ecosystems by anthropogenic activities, and health based standards which focus on minimizing the adverse environmental impacts on human health. This volume is aimed at the following five major target audiences: University and College Students, Educators, Professional Practitioners, Research Personnel, and Policy Analysts, Managers, and Decision
