Radar Array Processing Simon Haykin, John Litva, Terence J. Shepherd, 2013-03-08 Radar Array Processing presents modern techniques and methods for processing radar signals received by an array of antenna elements. With the recent rapid growth of the technology of hardware for digital signal processing it is now possible to apply this to radar signals and thus to enlist the full power of sophisticated computational algorithms. Topics covered in detail here include super resolution methods of array signal processing as applied to radar adaptive beam forming for radar and radar imaging. This book will be of interest to researchers and students in the radar community and also in related fields such as sonar, seismology, acoustics and radio astronomy. Principles of Space-time Adaptive Processing Richard Klemm, 2002 Annotation: This is a systematic introduction to MTI moving target indication system design for use in the fields of earth observation surveillance and reconnaissance with particular regard to the suppression of clutter returns. Coverage includes signal processing clutter models, array processing theory, adapted linear arrays, non-linear antenna configurations, circular arrays, space frequency techniques and clutter suppression jamming conditions. This book is a follow up to the author's successful first book on STAP.

Elliptically Symmetric Distributions in Signal Processing and Machine Learning Jean-Pierre Delmas, Mohammed Nabil El Korso, Stefano Fortunati, Frédéric Pascal, 2024 Zusammenfassung This book constitutes a review of recent developments in the theory and practical exploitation of the elliptical model for measured data in both classical and emerging areas of signal processing It develops techniques usable in among other areas graph learning robust clustering linear shrinkage information geometry subspace based algorithm design and semiparametric and misspecified estimation The various contributions combine to show how the goal of inferring information from a set of acquired data recurrent in statistical signal processing can be achieved even when the common practical assumption of Gaussian distribution in the data is not valid The elliptical model propounded maintains the performance of its inference

procedures even when that assumption fails The elliptical distribution being fully characterized by its location vector its scatter covariance matrix and its so called density generator used to describe the impulsiveness of the data is sufficiently flexible to model heterogeneous applications This book is of interest to any graduate students and academic researchers wishing to acquaint themselves with the latest research in an area of rising consequence It is also of assistance to practitioners working in data analysis wireless communications radar and image processing
