Radar Evaluation Handbook:

Radar Evaluation Handbook David Knox Barton, Charles Emerson Cook, Paul Charles Hamilton, ANRO Engineering, Inc, 1991 This book describes the steps involved in the evaluation of radar design and performance without complicated math Easily understood by both engineers and non technical personnel it contains a comprehensive discussion of the complex factors involved in the radar design process **Radar Evaluation Software** David K. Barton, William F. Barton, 1991-01-01

This software 10 51 4 disks in IBM compatible DOS format is based on the Radar evaluation handbook Artech House 1991 which was intended for use by nonspecialist engineers and technical personnel who are responsible for evaluating radar systems The approach to this software is to simplify the Modern radar system analysis software Artech House 1990 concentrating on evaluation of existing radar systems or equipment design and to provide evaluation tools The evaluator can use this software to predict the detection and tracking performance of a proposed or actual radar to identify the areas in which the performance changes rapidly as a function of radar or environmental parameters and to plan detailed simulations and tests to validate performance in these areas Annotation copyrighted by Book News Inc Portland OR **Ordinance**

Characterization and Ground-Water Monitoring David M. Nielsen, 2005-09-28 Published in 1991 the first edition of The Practical Handbook of Ground Water Monitoring quickly became the gold standard reference on the topic of ground water monitoring But as in all rapidly evolving fields regulations change technology advances methods improve and research reveals flaws in prior thinking As a consequence books that Principles of Modern Radar Missile Seekers Evgeny Markin, 2022-02-28 This book gives you an in depth look into the critical function of interference shielding for onboard radar of anti aircraft missile systems Intended for radar engineers and technicians specializing in anti aircraft defense the book reviews today's military and geo political threats helps you understand the functional needs of the various radar and anti missile systems to meet those threats and synthesizes considerations for devising practical and effective protection against interferences that affect the homing heads of anti aircraft guided missiles Three problematic interferences are presented and discussed in detail polarization interference interference to the sidelobe of onboard antennas and interference from two points in space including interference reflected from the earth water surface The book covers the basic principles of radiolocation including monopulse radars and gives insight into the fundamental functional units of anti aircraft missiles and surface to air missile systems The book presents guidance methods systems of direction finding problems on firing over the horizon and questions of accuracy and resolution all important for better addressing solutions of interference shielding You will learn how to estimate the stability of target auto tracking under conditions of cited interferences and better assess existing limitations on firing over the horizon by a long range anti aircraft system as well as hypersonic targets and satellites This is a unique and valuable resource for engineers and technicians who are involved in the design and development of anti aircraft guided missile systems with special emphasis on interference immunity and protection It can also be used as a textbook in advanced radar technology coursework and seminars Radio Wave Propagation Fundamentals, Second Edition Artem Saakian, 2020-12-31 This completely updated second edition of an Artech House classic provides a thorough introduction to the basic principles of electromagnetic wave propagation of radio frequencies in real world conditions fully updated by including new achievements in theory and technology It serves as an invaluable daily reference for practitioners in the field and as a complete organized text on the subject This comprehensive resource covers a wide range of essential topics from the classification of radio waves electromagnetic wave theory and antennas for RF radio links to the impact of the earth surface on the propagation of ground waves atmospheric effects in radio wave propagation and radio wave reception The book explores the propagation of the ground radio waves namely the waves that propagate in vicinity of the earth's surface e.g. guided by that interface without involvement of any atmospheric effects Specifics of the high frequency HF radio propagation due to reflections from ionospheric layers is studied based on commonly used models of the ionospheric vertical profiles Scattering of the radio waves of UHF and higher frequency bands from the random variations of the tropospheric refraction index from tiny air turbulences are also considered by using the principles of statistical radio physics Analysis of

propagation conditions on real propagation paths including analysis of the power budget of the VHF UHF link to assure its stability percentage of availability within observation time frame terrestrial broadcast mobile and satellite RF links are presented The engineering design of the cellular networks including LTE 4G 5G and upcoming higher generations is explored HF propagation predictions for extremely long range links design for commercial and military applications are explained Packed with examples and problems this book provides a theoretical background for astrophysical aeronomy and geophysical instrumentation design
