Regions of Recent Star Formation Herzberg Institute of Astrophysics, 1982-02-28 Proceedings of the Symposium on Neutral Clouds Near HII Regions Dynamics and Photochemistry held in Penticton British Columbia 24-26 June 1981

Regions of Recent Star Formation R.S. Bohn, P.E. Dewdney, 2012-12-06 The symposium on Neutral Clouds near HII Regions was prompted by an obvious need to bring together workers specifically interested in the dynamical and photochemical effects in regions showing clear evidence of on going star formation This is currently an area of considerable research activity with much new observational material over the wavelength range from X ray to radio Furthermore the field is beginning to mature No longer is molecular spectroscopy concerned only with the search for new lines and with preliminary surveys No longer are evolving HII regions modelled with the naive assumption of constant density Similarly ideas of successive star formation champagne and blister models of HII regions and refinements to abundance calculations are examples which show that theoretical initiative is keeping pace We were both surprised and gratified by the number of contributed papers and the extent to which they addressed the subject matter In the proceedings we have grouped these papers near the most appropriate of the four invited review papers The subjects of these reviews are in the general areas of Evolution of HII Regions Dynamical Interactions Chemistry in Active Regions and Infrared and Maser Sources The symposium comprised 42 orally presented papers and 23 poster papers All but two are reproduced in this volume

Regions of Recent Star Formation P. E. Dewdney, R. S. Roger, 1982 *Scientific and Technical Aerospace Reports*, 1991 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **Star Formation, Galaxies and the Interstellar Medium** Jose Franco, Federico Ferrini, G. TENORIO-TAGLE (Ed), 1993-06-10 The enormously powerful phenomena of starbursts are examined in this book These spectacular star forming events are seen on large scales in some galaxies often triggered by galactic interactions An intriguing implication of starburst research is that active galactic nuclei AGN may not be powered by accreting black holes Instead theories are presented where compact powerhouses of dust enshrouded star formation lie at the core of AGN with supernovae exploding roughly once per year within massive nuclear concentrations of gas This book collects articles from a timely international conference in Elba Italy in 1992 these comprise a thorough review of the most important developments in galactic scale star formation since the starburst revolution of the late 1980s This text will introduce graduate students to this exciting area and keep experts abreast with rapid developments in it Star Formation in Galaxies, 1987 Galactic and Extragalactic Radio Astronomy E. Bouton, Gerrit L. Verschuur, Kenneth I. Kellermann, 2012-12-06 Galactic and Extragalactic Radio Astronomy is a fundamental text for graduate students and professional astronomers and covers all aspects of radio astronomy beyond the solar system Each chapter is written by a renowned expert in the field and contains a review of a particular area of radio astronomy and

presents the latest observations and interpretations as well as an extensive view of the literature as of 1988 Topics covered include galactic continuum emission HII regions the diffuse interstellar medium interstellar molecules astronomical masers neutral hydrogen the galactic center radio stars supernova remnants pulsars extragalactic hydrogen radio galaxies and quasars the microwave background and cosmological radio sources

Astronomy: A Physical Perspective Marc L. Kutner, 2003-07-31 This fully revised and updated text is a comprehensive introduction to astronomical objects and phenomena By applying some basic physical principles to a variety of situations students will learn how to relate everyday physics to the astronomical world Starting with the simplest objects the text contains explanations of how and why astronomical phenomena occur and how astronomers collect and interpret information about stars galaxies and the solar system The text looks at the properties of stars star formation and evolution neutron stars and black holes the nature of galaxies and the structure of the universe It examines the past present and future states of the universe and final chapters use the concepts that have been developed to study the solar system its formation the possibility of finding other planetary systems and the search for extraterrestrial life This comprehensive text contains useful equations chapter summaries worked examples and end of chapter problem sets

The Magellanic Clouds Raymond Haynes, Douglas Milne, 1991-02-28 Symposium 148 The Magellanic Clouds and their Dynamical Interaction with the Milky Way was the first IAU Symposium held in Australia since 1973 In all 23 countries were represented by 149 participants The Symposium was held from July 9 to 13 1990 at Womens College the University of Sydney The last symposium on the Magellanic Clouds was held in 1983 in Ttbingen Germany Since then new ground and satellite based instruments have become available A range of results from these instruments were presented at IAU Symposium 148 and are published in these proceedings IAU Symposium 148 was timed to coincide with the commissioning of the Australia Telescope and indeed a few of the first results from that instrument were presented at this Symposium Over the next decade the Australia Telescope is destined to make a major impact on Magellanic Cloud research Papers are arranged in five main sections reflecting the Symposium timetable Large Scale Structure and Kinematics Star Formation and Clustering Stellar Evolution The Interstellar Medium The LMC SMC Galaxy System These are preceeded by both the introduction to and the summary of the Symposium Questions and answers from the oral sessions are reproduced at the end of each section

From Dust To Stars Norbert S. Schulz, 2007-03-06 Studies of stellar formation in galaxies have a profound impact on our understanding of the present and the early universe The book describes complex physical processes involved in the creation of stars and during their young lives It illustrates how these processes reveal themselves from radio wavelengths to high energy X rays and gamma rays with special reference towards high energy signatures Several sections devoted to key analysis techniques demonstrate how modern research in this field is pursued

Zech, 2013-12-14 Astronomy and Astrophysics Abstracts which has appeared in semi annual volumes since 1969 is devoted to the recording summarizing and indexing of astronomical publications throughout the world It is prepared under the auspices of the International Astronomical Union according to a resolution adopted at the 14th General Assembly in 1970

Astronomy and Astrophysics Abstracts aims to present a comprehensive documentation of literature in all fields of astronomy and astrophysics. Every effort will be made to ensure that the average time interval between the date of receipt of the original literature and publication of the abstracts will not exceed eight months. This time interval is near to that achieved by monthly abstracting journals compared to which our system of accumulating abstracts for about six months offers the advantage of greater convenience for the user. Volume 31 contains literature published in 1982 and received before July 15 1982 some older literature which was received late and which is not recorded in earlier volumes is also included. We acknowledge with thanks contributions to this volume by Dr J Bouska Prague who surveyed journals and publications in Czech and supplied us with abstracts in English. The Interplay Between Massive Star Formation, the ISM and Galaxy Evolution D. Kunth, 1996. *Galaxy Merger Identification Methods, and Investigations of the Role of Mergers in Galaxy Evolution* Kiyoaki Christopher Omori, 2024-12-26. This book offers new findings on the impact of galaxy mergers on galaxy evolution and related processes. Galaxies are astronomical objects composed of stars gas and dark matter. The main pathway for galaxy evolution in the currently accepted model for structure growth is through interactions and mergers or the process in which multiple galaxies interact collide and end up as one larger galaxy. Galaxy interactions and mergers are also considered to drive various processes pertaining to galaxy evolution such as star formation active galactic nuclei (AGN) activity and chemical evolution. As such not only are merging galaxy systems important to understand galaxy structure growth in a cosmological context they are also unique laboratories to study evolutionary processes taking place in galaxies. However despite their importance the relative role of galaxy mergers on galaxy evolution is still heavily contested. One reason for this is difficulty in identifying merger galaxies in observational data. Many different methods have been adopted for merger galaxy identification but none of them are perfect. Moreover the use of differing selection methods can result in widely different samples which can alter statistical results. As such a novel robust method for merger identification is required to deepen our understanding of galaxy mergers. In this book we introduce new methods to identify galaxy mergers from observational data. The first method combines the use of visual identification both of optical and kinematic images with spectroscopic pair identification. The second is machine learning based using a training method called fine tuning an application of transfer learning. A pre-trained model on galaxy images is further fine-tuned using a sample of synthetic galaxy images to make a classifier for merger identification. Using samples identified by our methods the author conducts three studies: the impact of mergers on galaxy chemical evolution, the effect of

galaxy local environment on merging activity and the connection between mergers and AGN activity This book is mainly intended for astrophysicists particularly those studying galaxies however is open for all to read
