Reactive Oxygen Species and Male Fertility Cristian O'Flaherty, 2020-12-02 Reactive oxygen species ROS are inevitable by products of aerobic cells A delicate balance between ROS production and antioxidant defences is essential to assure cell function This requirement is also true for the spermatozoon the male gamete with the unique goal of carrying and delivering the paternal genome into the oocyte Oxidative stress promotes damage in lipids proteins and DNA of spermatozoa and this oxidative damage is associated with infertility The ROS dependent damage could occur at different stages of the production and maturation of the sperm On the other hand low and controlled levels of ROS are necessary to trigger and regulate sperm function When ejaculated spermatozoa are incapable of fertilizing the egg They must reside in the oviduct of the female genital tract to undergo a yet to be understood the biochemical process called capacitation Once capacitated the spermatozoon undergoes the exocytotic event called acrosome reaction and fertilize the oocyte ROS regulate the different molecular mechanisms such as sperm motility capacitation and acrosome reaction to assure fertilization This Special Issue includes original research and reviews of

literature concerning the role of reactive oxygen species in male reproduction particularly the role of antioxidants in the regulation of male fertility as well as basic and clinical studies using antioxidant based strategies for the treatment of male infertility

Human Semen Analysis Ashok Agarwal, Florence Boitrelle, Ramadan Saleh, Rupin Shah, 2024-07-16 Infertility is an important public health problem affecting around 15% of couples worldwide A male factor contributes to about 50% of all cases of infertility Male infertility could be related to a variety of congenital or acquired causes that lead to abnormal reproductive potential and poor sperm quality and function To this date semen analysis remains the cornerstone of male infertility evaluation Clinicians widely reference the World Health Organization WHO Laboratory Manual for the Examination and Processing of Human Semen which provides a detailed description of a variety of semen tests However the manual does not provide a sufficient clinical context for the various tests that are described This book is intended to bridge the gap between the laboratory manual and the clinician by explaining in detail the test indication its clinical utility interpretation of results and presenting a decision algorithm based on the test results The book has 19 chapters grouped under seven sections that follow the chapters of the sixth edition of the WHO manual Each chapter is written and reviewed by a team of senior clinicians thus bringing a perspective that is truly clinically relevant This book will be of great value to all clinicians involved in the management of male infertility and will also be of interest to laboratory scientists involved in semen testing by providing them with clinical perspectives of the test they perform

Human Semen Analysis From the WHO Manual to the Clinical Management of Infertile Men is a useful guide for utilizing the WHO manual interpreting test results and deciding what subsequent clinical actions to take

Male Fertility and Infertility T. D. Glover, C. L. R. Barratt, 2009-03-19 This contemporary account of male fertility provides a much needed bridge between those seeking to understand the subject from an evolutionary and biological perspective and those with clinical responsibility for the investigation and treatment of infertility Accordingly the first half of the book deals with the evolutionary aspects of male reproduction and sperm competition sperm production and delivery in man and other animals spermatogenesis and epididymal function sperm transport in the female tract and the apparent decline in human sperm count The second part of the book puts greater emphasis on clinical problems and opens with a discussion of intracytoplasmic sperm injection its value and limitations This is followed by a review of modern developments in the genetics of male fertility and proceeds to a further chapter on the role of surgical procedures used in the treatment Semen analysis is critically reviewed and the molecular techniques now being used in preimplantation diagnosis and in the study of mitochondrial inheritance are fully described Taken together these chapters written by an international team of authors illustrate the breadth of vision needed to tackle the problem of male fertility
