

Summary: Amine Protecting Groups

Since amines are so nucleophilic, it's often desirable to mask their reactivity using a removable protecting group.

The most common situation is in **peptide synthesis**, where two amino acids are joined together. If the nitrogens of both amino acids are unprotected, then we can get undesired mixtures of products!

Carbamates are practical protecting groups for amines. They can be installed and removed under relatively mild conditions.

Two of the most common carbamate protecting groups are *t*-butyloxycarbonyl (Boc) and carboxybenzyl (Cbz).
