## **Rehabilitated Estuarine Ecosystem:**

A Rehabilitated Estuarine Ecosystem Martin J. Attrill, 2012-12-06 The well documented history of pollution and recovery in the Thames Estuary has made the system one of the world's most famous case studies. However the story is incomplete in terms of the status of the rehabilitated ecosystem resulting from the remedial management policies. What ecosystem might we expect to recover from a once lifeless estuary? Have the extensive efforts made by policy makers, environmental managers and scientists resulted in a diverse complex estuary that may be a model for other systems? This book draws together many detailed aspects of the recovering Thames Estuary ecosystem from environmental management and scientific sources. The result is probably the most comprehensive account of the management and ecology of a single estuarine system yet produced. It includes important and extensive long term studies of the fish communities, water quality and management policy, spatial accounts along the full length of the estuary for benthic invertebrates and algae, significant case studies on zooplankton, saltmarshes and parasitology as well as an overview looking forward to the next millennium. Altogether this study of the long term ecological consequences of management policy provides a benchmark for comparison with other estuarine ecosystems, both natural and rehabilitated, and forms a unique and valuable reference for environmental managers, estuarine scientists and ecologists.

**A Rehabilitated Estuarine Ecosystem** Martin J. Attrill, 1998-11-30 Jim Green 1 1 THE THAMES ESTUARY: A PERSONAL VIEW For almost 50 years I have lived close to the Thames estuary. Figure 1.1 In the early 1950s from our flat in Pimlico we could walk along the embankment opposite Battersea Power Station. At low tide the exposed mud had large red patches caused by the haemoglobin in innumerable tubificid worms. These formed the basis of a minor trade. Men with waders and sieves would collect the worms and sell them to the aquarium trade as food for fishes. The superabundance of these worms depended on the gross organic pollution of this reach of the Thames. Towards the end of the 1950s we moved to Teddington, within a few minutes walk from the lock. Casual observation of the birds on the river indicates an increase in the piscivores over the last 20 years. Cormorants (*Phalacrocorax carbo*) are regularly seen and grey herons (*Ardea cinerea*) are more abundant. On a good day it is possible to see up to eight herons around the weir and below the lock. Another bird that is now common in the area is the great crested grebe (*Podiceps cristatus*). The regular mallard (*Anas platyrhynchos*) and Canada geese (*Branta canadensis*) are sometimes joined by tufted duck (*Aythya fuligula*) and mandarin (*Aix galericulata*).

**The Estuarine Ecosystem** Donald S. McLusky, Michael Elliott, 2004-04-29 For the inhabitants of many of the world's major towns and cities, estuaries provide their first and nearest glimpse of a natural habitat. Despite the attempts of man to pollute or reclaim it, the estuarine ecosystem continues to provide a fascinating insight into a natural world where energy is transformed from sunlight into plant material and then through the steps of a food chain is converted into a rich food supply for birds and fish. The book provides a concise, readable introduction to estuarine ecology. First published in 1981, it soon established itself as the principle textbook of choice in the UK, NW Europe. This new edition builds upon the strengths

of the earlier editions but has been thoroughly revised throughout The new co author brings a human impact dimension to the revised book It is written for advanced undergraduate and graduate students particularly taught masters who have had a general ecology course but no further training in estuarine science It will be useful to both professional researchers and practical managers in marine ecology and environmental science who seek a compact but comprehensive introduction to estuarine ecology *MRGO Ecosystem Restoration Plan Feasibility Study* United States. Office of the Assistant Secretary of the Army (Civil Works),2013 **The Economics of Estuary Restoration in South Africa** Douglas J. Crookes,2023-11-16 This book examines the economic costs and benefits of the ecological restoration of estuaries utilizing case studies from South Africa Estuaries are important ecosystems from both an ecological and human perspective Yet in many parts of the world they are often degraded environments facing threats from climate change invasive species fire and wastewater pollution While the environmental benefits of restoring degraded environments are well discussed this book specifically examines the economic benefits of doing so It applies a cost benefit analysis which focuses on a range of key ecosystem services including human health fishing value recreational value and property value The book utilizes three detailed studies of the Swartkops estuary the Great Brak estuary and the Knysna estuary in South Africa but also draws out lessons that can be applied to coastal environments across the world Overall this book demonstrates that ecological restoration does pay and that the value of additional ecosystem services gained through restoration far exceeds the costs associated with this restoration process This book will be of great interest to students and scholars of environmental management and restoration ecological economics ecosystem services and environmental conservation Managing Urban River Ecosystems for Achieving Regional Sustainability in the Pearl River Delta Region Hui Liu,2024-12-13 This book provides a systematic understanding of urban river management from the perspective of ecosystem health in the Pearl River Delta region of China where rapid socio economic development happens together with exploitation and pollution of the natural environment Urban rivers which used to support navigation and provide water resources to humans now suffer from various kinds of ecosystem degradation and thus create threats to regional sustainability This book treats the urban river as an ecosystem which closely relates to and interacts with humans and defines urban river ecosystem health as a requirement at three levels sensorial fitness living water and affinity with humans which emphasizes more on the human oriented needs The evolution processes of urban river ecosystem health protection can generally be divided into four phases demonstrating the relationships between human activities and UREH status as simple balance uncontrolled imbalance continuous interlocking and stable harmony The relationships between typical urban rivers and humans in the Pearl River Delta region China are then analyzed on both regional and local scales and from lateral time longitudinal and spatial dimensions Intensive human activities together with the intrinsic complex and high density river network result in deteriorating water quality changing hydrological conditions and damaging the river ecosystem in this region From the perspective of political ecology various actors in urban

river management include governmental agencies business multilateral institutions ENGOs and grassroots actors whose unequal power relations vary over time and space causing conflicts as well as coordination Especially different governmental agencies are engaged resulting into overlap and gap among their functions as well as spatial discrepancy River Chief System as a new practice of urban river management has strengthened the collaboration effect and got success in river pollution control The spatial scale effect of human activities on urban river water quality is examined implying the necessity of adopting a unified management strategy at the buffer zone scale to protect and restore urban river ecosystem health The target audience of this book includes postgraduate students and researchers who have research interests in as well as government officers whose routine is related to water management

Estuarine and coastal waters are acknowledged centres for anthropogenic impacts Superimposed on the complex natural interactions between land rivers and sea are the myriad consequences of human activity a spectrum ranging from locally polluting effluents to some of the severest consequences of global climate change For practitioners academics and students in the field of coastal science and policy this timely book examines and exemplifies current and future challenges from upper estuaries to open coasts and adjacent seas from tropical to temperate latitudes from Europe to Australia This authoritative volume marks the 50th anniversary of the Estuarine and Coastal Sciences Association Drawing on the expertise of more than 60 specialist contributors individual chapters address coastal erosion and deposition open shores to estuaries and deltas marine plastics coastal squeeze and habitat loss tidal freshwaters saline incursion and estuarine squeeze restoration management using remote data collection carbon storage species distribution and non natives shorebirds Modelling

environmental change physical processes such as sediments and modelling sea level rise and estuarine tidal dynamics estuaries as fish nurseries policy versus reality in coastal conservation developments in estuarine coastal and marine management In addition to providing an overview of current scientific understanding the material gathered here offers a clear eyed perspective on what needs to be done to protect these fragile and vital ecosystems
