*Occupational Therapy for Orthopaedic Conditions* Dina Penrose, 2013-12-20 This book is written with occupational therapy students in mind as a guide to newly qualified occupational therapists and for those returning to work after a break in service Over the years I have been asked many times by newly appointed staff whether I could recommend a book to prepare them for working with orthopaedic patients I hope this small volume will fill the gap in the literature on the subject and that it will be useful as a quick reference book I hope it may also fall into the hands of those in other disciplines and enable them to understand and appreciate the contribution of the occupational therapist to the rehabilitation team This is the era of joint replacement with ever increasing demand for primary and revision surgery Improved implants and improved surgical techniques are constantly being researched Surgery for bone tumour is less mutilating and more hopeful than ever before Operations to release tendons and soft tissue contractures tendon transfers osteotomies spinal fusion joint fusion etc are performed on patients with neurological problems thus improving function and appearance and preventing further deformity These are some examples of procedures in this exciting and fast developing field while hospital beds are occupied for an ever shorter period of time and the potential for occupational therapy is enormous If surgery is to be successful the

importance of assessing the patient as a human being cannot be over emphasised Souter 1987 This is precisely the approach of the occupational therapist     Howard v. General Motors Corporation, 427 MICH 358 (1986) ,1986 73876
