Concrete Floors and Slabs Ravindra K. Dhir,Moray D. Newlands,T. A. Harrison,2002 Concrete is a global material that underwrites commercial wellbeing and social development There is no substitute that can be used on the same engineering scale and its sustainability exploitation and further development are imperatives to creating and maintaining a healthy economy and environment worldwide The pressure for change and improvement of performance is relentless and necessary Concrete must keep evolving to satisfy the increasing demands of all its users *Advances in Concrete Slab Technology*

Ravindra K. Dhira OBE, John G. L. Munday, 2014-05-18 *Advances in Concrete Slab Technology* documents the proceedings of the International Conference on Concrete Slabs held at Dundee University on April 3-6, 1979. This book discusses the influence of steel fiber reinforcement on the shear strength of slab-column connections, sulfur-treated concrete slabs, yield line analysis of orthotropically reinforced exterior panels of flat slab floors, and behavior of flat slab edge column joints. The design of multiple panel flat slab structures, structural behavior of floor slabs in shear wall buildings, shrinkage and cracking of concrete at early ages, and slab construction for HAB system modules are also elaborated. This text likewise covers the direct finishing of concrete slabs using the early age power grinding technique, application of vacuum dewatering to in situ slab production, retexturing of concrete slabs, and fatigue resistance of composite precast and in situ concrete floors. This publication is a good reference for students and individuals concerned with the practices and research relating to slab technology.

Composite Construction in Steel and Concrete 9 Markus Knobloch, Ulrike Kuhlmann, Wolfgang Kurz, Markus Schafer, 2024-09-03. Composite Construction in Steel and Concrete IX. The highly successful International Conference series on Composite Construction in Steel and Concrete is a major forum for researchers, practitioners, and engineers to share and discuss their research, practical experience, and innovations related to composite constructions in steel and concrete. Composite Construction is a key consideration in the design of buildings and infrastructure. Significant advances in research and development have increased the knowledge of the structural performance of composite structures. Some areas are becoming well understood and implemented in the design practice codes and standards worldwide, while others like e.g. application of high performance materials or dismantlable and reusable composite members need further studies. Trends that are reflected by the conference papers. The 62 contributions contained in this book cover a wide variety of topics including composite beams, composite columns, composite decks, joints, shear connections, fire behavior, seismic behavior, fatigue, and fracture, codification, composite bridges, innovative hybrid structures, numerical investigations, and practical applications. The Papers are peer reviewed by the Scientific Board and may be adapted based on the outcome of the discussions during the conference. This book therefore summarizes the state of the art in composite construction worldwide as presented at the 9th International Conference on Composite Construction in Steel and Concrete hosted by the Ruhr University of Bochum, University of Stuttgart, RPTU Kaiserslautern, Landau, and University of Luxembourg, representing the work of authors from 18 countries.
