Arantes e Oliveira, J. Bento, E. Pereira, 2012-12-02 The first EPMESC Conference took place in 1985 It was during the Conference recognising the success it had been that the promoters decided to organise other EPMESC conferences giving birth to a new series of international meetings devoted to computational methods in engineering The variety of subjects covered by the papers submitted to the 7th Conference demonstrates how much computational methods expanded and became richer in their applications to Science and Technology New paradigms are being cultivated as non numerical applications started to compete with the more traditional numerical ones The scientific and technological communities to which the EPMESC Conferences used to be addressed themselves have changed The two volume Proceedings that we achieved to gather represent many of the interesting developments that are taking place not only in the Asia Pacific Region but also in some other scientifically advanced parts of the World and cover a vast list of subjects grouped under the following headings Applied Mathematics Physics and Materials Science Solid Mechanics Finite Element and Boundary Element Methods Structural Analysis Structural Dynamics and Earthquake Engineering Structural Engineering Reinforced Concrete Knowledge Based Systems Artificial Neural Networks and Genetic Algorithms Computer Aided Instruction Computer Aided Design and Computer Aided Engineering Geographic Information Systems Environmental Applications Road Engineering Geotechnics Soil Mechanics Fluid Mechanics and Hydraulics Two hundred and fifty one summaries were accepted many of them with comments and restrictions by the Programme Committee From these 153 papers resulted many of them from Portuguese and Chinese origin that were submitted to the revision of an international panel of referees from Australia Belgium Brazil China Italy Macao Portugal Switzerland United Kingdom and United States to which we gladly acknowledge our gratitude and appreciation

Buildings and Structures under Extreme Loads Chiara Bedon, Flavio Stochino, Daniel Honfi, 2020-11-25 Exceptional loads on buildings and structures may have different causes including high strain dynamic effects due to natural hazards man made attacks and accidents as well as extreme operational conditions severe temperature variations humidity etc All of these aspects can be critical for specific structural typologies and or materials that are particularly sensitive to external conditions In this regard dedicated and refined methods are required for their design analysis and maintenance under the expected lifetime There are major challenges related to the structural typology and material properties with respect to the key features of the imposed design load Further issues can be derived from the need for risk mitigation or retrofit of existing structures as well as from the optimal and safe design of innovative materials systems Finally in some cases no appropriate design recommendations are available and thus experimental investigations can have a key role within the overall process In this Special Issue original research studies review papers and experimental and or numerical investigations are presented for the structural performance assessment of buildings and structures under various extreme conditions that are of interest for

design Seismic Retrofit of Existing Reinforced Concrete Buildings Stelios Antoniou, 2023-01-31 Seismic Retrofit of Existing Reinforced Concrete Buildings Understand the complexities and challenges of retrofitting building infrastructure Across the world buildings are gradually becoming structurally unsound Many were constructed before seismic load capacity was a mandatory component of building standards and were often built with low quality materials or using unsafe construction practices Many more are simply aging with materials degrading and steel corroding As a result efforts are ongoing to retrofit existing structures and to develop new techniques for assessing and enhancing seismic load capacity in order to create a safer building infrastructure worldwide Seismic Retrofit of Existing Reinforced Concrete Buildings provides a thorough book length discussion of these techniques and their applications Balancing theory and practice the book provides engineers with a broad base of knowledge from which to approach real world seismic assessments and retrofitting projects It incorporates knowledge and experience frequently omitted from the building design process for a fuller account of this critical engineering subfield Seismic Retrofit of Existing Reinforced Concrete Buildings readers will also find Detailed treatment of each available strengthening technique complete with advantages and disadvantages In depth guidelines to select a specific technique for a given building type and or engineering scenario Step by step guidance through the assessment retrofitting process Seismic Retrofit of Existing Reinforced Concrete Buildings is an ideal reference for civil and structural engineering professionals and advanced students particularly those working in seismically active areas
