*Relativity and Common Sense* H. Bondi, 1962      *Relativity and common sense* Hermann Bondi, 1980      **Relativity and common sense** Sir Hermann BONDI, 1964      *Common Sense and Science from Aristotle to Reid* Benjamin W. Redekop, 2020-11-05

Common Sense and Science from Aristotle to Reid reveals that thinkers have pondered the nature of common sense and its relationship to science and scientific thinking for a very long time. It demonstrates how a diverse array of neglected early modern thinkers turn out to have been on the right track for understanding how the mind makes sense of the world and how basic features of the human mind and cognition are related to scientific theory and practice. Drawing on a wealth of primary sources and scholarship from the history of ideas, cognitive science, and the history and philosophy of science, this book helps readers understand the fundamental historical and philosophical relationship between common sense and science.

*A New Perspective on Relativity* Bernard H. Lavenda, 2012. Starting off from noneuclidean geometries apart from the method of Einstein's equations, this book derives and describes the phenomena of gravitation and diffraction. A historical account is presented exposing the missing link in Einstein's construction of the theory of general relativity: the uniformly rotating disc, together with his failure to realize that the Beltrami metric of hyperbolic geometry with constant curvature describes exactly the uniform acceleration observed. This book also explores these questions: How does time bend? Why should gravity propagate at the speed of light? How does the expansion function of the universe relate to the absolute constant of the noneuclidean geometries? Why was the Sagnac effect ignored? Can Maxwell's equations accommodate mass? Is there an inertia due solely to polarization? Can objects expand in elliptic geometry like they contract in hyperbolic geometry?

Aim and Scope: The New Yearbook for Phenomenology and Phenomenological Philosophy provides an annual international forum for phenomenological research in the spirit of Husserl's groundbreaking work and the extension of this work by such figures as Scheler, Heidegger, Sartre, Levinas, Merleau-Ponty, and Gadamer. **Masters of Mathematics** Robert A. Nowlan, 2017-05-13 The original title for this work was Mathematical Literacy What Is It and Why You Need it The current title reflects that there can be no real learning in any subject unless questions of who what when where why and how are raised in the minds of the learners The book is not a mathematical text and there are no assigned exercises or exams It is written for reasonably intelligent and curious individuals both those who value mathematics aware of its many important applications and others who have been inappropriately exposed to mathematics leading to indifference to the subject fear and even loathing These feelings are all consequences of meaningless presentations drill rote learning and being lost as the purpose of what is being studied Mathematics education needs a radical reform There is more than one way to accomplish this Here the author presents his approach of wrapping mathematical ideas in a story To learn one first must develop an interest in a problem and the curiosity to find how masters of mathematics have solved them What is necessary to be mathematically literate It is not about solving algebraic equations or even making a geometric proof These are valuable skills but not evidence of literacy We often seek answers but learning to ask pertinent questions is the road to mathematical literacy Here is the good news new mathematical ideas have a way of finding applications This is known as the unreasonable effectiveness of mathematics

**The End of Time** Julian Barbour, 2001-11-29 Richard Feynman once quipped that Time is what happens when nothing else does But Julian Barbour disagrees if nothing happened if nothing changed then time would stop For time is nothing but change It is change that we perceive occurring all around us not time Put simply time does not exist In this highly provocative volume Barbour presents the basic evidence for a timeless universe and shows why we still experience the world as intensely temporal It is a book that strikes at the heart of modern physics It casts doubt on Einstein's greatest contribution the spacetime continuum but also points to the solution of one of the great paradoxes of modern science the chasm between classical and quantum physics Indeed Barbour argues that the holy grail of physicists the unification of Einstein's general relativity with quantum mechanics may well spell the end of time Barbour writes with

remarkable clarity as he ranges from the ancient philosophers Heraclitus and Parmenides through the giants of science Galileo Newton and Einstein to the work of the contemporary physicists John Wheeler Roger Penrose and Steven Hawking Along the way he treats us to enticing glimpses of some of the mysteries of the universe and presents intriguing ideas about multiple worlds time travel immortality and above all the illusion of motion The End of Time is a vibrantly written and revolutionary book It turns our understanding of reality inside out *Define Universe and Give Two Examples* Barton E. Dahneke,2006 **Bananaworld** Jeffrey Bub,2016 Information theory is essentially about correlations and the novel approach of Bananaworld is to get at what s counterintuitive about quantum information by considering correlations between normally mundane experiences that every reader can relate to **Inside Modernism** Thomas Vargish,Delo E. Mook,1999-01-01 In this book a professor of literature and a physicist offer a broad new interdisciplinary account of Modernism Thomas Vargish and Delo E Mook encompass physics the visual arts and literature in a thought provoking analysis of the period from the 1880s to World War II Uncovering common structures and values underlying each of these disparate fields the authors define Modernism and its historical location between nineteenth century intellectual conventions that preceded it and the Postmodernism that followed Bridging boundaries that traditionally divide disciplines Vargish and Mook create a uniquely coherent and comprehensive view of the aesthetics and intellectual values that characterize the culture of Modernism *Popular Physics and Astronomy* Roger Smith,1996-07-11 An essential resource to this growing and important body of popular physics and astronomy literature The 895 books articles and nonprint media are divided by subject and include chapters devoted to the history of physics basic principles books for children and young adults and audiovisual presentations **Gaither's Dictionary of Scientific Quotations** Carl C. Gaither,Alma E. Cavazos-Gaither,2008-01-08 Scientists and other keen observers of the natural world sometimes make or write a statement pertaining to scientific activity that is destined to live on beyond the brief period of time for which it was intended This book serves as a collection of these statements from great philosophers and thought influencers of science past and present It allows the reader quickly to find relevant quotations or citations Organized thematically and indexed alphabetically by author this work makes readily available an unprecedented collection of approximately 18 000 quotations related to a broad range of scientific topics [The Routledge Companion to Philosophy of Time](#) Nina Emery,2025-09-30 The Routledge Companion to Philosophy of Time is a comprehensive and authoritative guide to a growing subfield of philosophical research which spans traditional and contemporary debates about the nature of time as well as a diverse set of historical geographical and cultural contexts This book also highlights the interdisciplinary connections between philosophy of time and nearby fields including history physics psychology cognitive development and more Comprising 50 chapters by a diverse team of contributors from all over the globe the Companion is divided into five parts I History of Philosophy of Time II Contemporary Metaphysics of Time III Time and Physics IV Time and Mind V Further Connections The volume is essential reading for students and researchers of

**The Short Range Anti-Gravitational Force and the Hierarchically Stratified Space-Time Geometry in 12 Dimensions**

Christina Anne Knight,2010-08-09 The field of cosmology may be on the verge of a significant paradigm shift as there is an increasing awareness that scientists have missed something fundamental as they carry on in their quest for a theory of everything and a theory that unites general relativity with quantum mechanics Knight proposes a new theory suggesting that the space time geometry possesses a complex hierarchical structure that comprises twelve dimensions nine space dimensions and three time Furthermore this structure is divided into three strata each of which has its own four dimensional structure and stratum specific fundamental forces and parameters with variations in the gravitational constant  $G$  the speed of light  $c$  and the Planck constant Through the pages of this work this theory is further explained

**Physics and Literature** Aura Heydenreich,Klaus Mecke,2021-12-20 Physics and Literature is a unique collaboration between physicists literary scholars and philosophers the first collection of essays to examine together how science and literature beneath their practical differences share core dimensions forms of questioning thinking discovering and communicating insights This book advances an in depth exploration of relations between physics and literature from both perspectives It turns around the tendency to discuss relations between literature and science in one sided and polarizing ways The collection is the result of the inaugural conference of ELINAS the Erlangen Center for Literature and Natural Science an initiative dedicated to building bridges between literary and scientific research ELINAS revitalizes discussion of science literature interconnections with new topics ideas and angles by organizing genuine dialogue among participants across disciplinary lines The essays explore how scientific thought and practices are conditioned by narrative and genre fiction models and metaphors and how science in turn feeds into the meaning making of literary and philosophical texts These interdisciplinary encounters enrich reflections on epistemology cognition and aesthetics
