Simulation Of Computer Communication Systems:

Simulation of Computer Communication Systems Charles H. Sauer, 1983

Simulation of Computer Communication Systems Charles H. Sauer, Edward A. MacNair, 1983 *Simulation of Communication Systems* Philip Balaban, Michel C. Jeruchim, K. Sam Shanmugan, 2012-12-06 Simulation may be defined as the discipline whose objective is to imitate one or more aspects of reality in a way that is as close to that reality as possible indeed an apt synonym that is gaining some currency is artificial reality Under this definition simulation is a very old discipline Probably the first applications of simulation were to scale models of various types of dynamical structures or mechanical devices Man has always looked for ways to try things out before building the real thing this is the motivation behind any form of simulation Thus simulation of communication systems is concerned with imitating some aspects of the behavior of communication systems It is implicit in our use of simulation that the medium so to speak for carrying it out is the digital computer Computer based modeling and simulation of communication systems has only developed in the last 20 years or so since the advent of modern digital computers A variety of modeling and simulation techniques have been developed and described in widely scattered journals but until now there has not been a single volume devoted to the subject We have tried to provide a unified framework that describes both the disciplines involved and the methods of modeling and simulating communication systems and subsystems In the electronic era the first type of computer simulation in today's use of the term took shape in the form of analog computers Discrete Event Simulation with Application to Computer Communication Systems Performance Pawan Kumar Choudhary, 2005 Applied System Simulation Mohammad S. Obaidat, Georgios I. Papadimitriou, 2012-12-06 Simulation and modeling are efficient techniques that can aid the city and regional planners and engineers in optimizing the operation of urban systems such as traffic light control highway toll automation consensus building public safety and environmental protection When modeling transportation systems such as freeway systems arterial or downtown grid systems the city planner and engineer is concerned with capturing the varied interactions between drivers automobiles and the infrastructure Modeling and simulation are used to effectively optimize the design and operation of all of these urban systems It is possible that in an urban simulation community workshop citizens can work interactively in front of computers and be able using the click of the mouse to walk up to their own front porch looking at the proposed shopping mall alternatives across the street from virtually any angle and proposed bridge or tunnel and see how it can reduce traffic congestion Buildings can be scaled down or taken out their orientation can be changed in order to check the view and orientation in order to have better site with efficient energy conservation The stone or brick material on a building can be replaced by colored concrete or more trees and lampposts can be placed on the site Such flexibility in simulation and animation allows creative ideas in the design and orientation of urban sites to be demonstrated to citizens and decision makers before final realization Simulation of Communication Systems Michel C. Jeruchim, Philip Balaban, K. Sam

Shanmugan,2000-10-31 Since the first edition of this book was published seven years ago the field of modeling and simulation of communication systems has grown and matured in many ways and the use of simulation as a day to day tool is now even more common practice With the current interest in digital mobile communications a primary area of application of modeling and simulation is now in wireless systems of a different flavor from the traditional ones This second edition represents a substantial revision of the first partly to accommodate the new applications that have arisen New chapters include material on modeling and simulation of nonlinear systems with a complementary section on related measurement techniques channel modeling and three new case studies a consolidated set of problems is provided at the end of the book

Computational Modeling and Simulation of Advanced Wireless Communication Systems Agbotiname Lucky Imoize,Webert Montlouis,Mohammad S. Obaidat,Segun I. Popoola,Mohammad Hammoudeh,2024-11-29 The book covers the exploitation of computational models for effectively developing and managing large scale wireless communication systems The goal is to create and establish computational models for seamless human interaction and efficient decision making in beyond 5G wireless systems Computational Modeling and Simulation of Advanced Wireless Communication Systems looks to create and establish computational models for seamless human interaction and efficient decision making in the beyond 5G wireless systems This book presents the design and development of several computational modeling techniques and their applications in wireless communication systems It examines shortcomings and limitations of the existing computational models and offers solutions to revamp the traditional architecture toward addressing the vast network issues in wireless systems The book addresses the need to design efficient computational and simulation models to address several issues in wireless communication systems such as interference pathloss delay traffic outage and so forth It discusses how theoretical mathematical and experimental results are integrated for optimal system performance to enhance the quality of service for mobile subscribers Further the book is intended for industry and academic researchers scientists and engineers in the fields of wireless communications and ICTs It is structured to present a practical guide to wireless communication engineers IT practitioners researchers students and other professionals Performance of Computer Communication Systems Boudewijn R. Haverkort,1998-12-04 Computer communication systems or distributed systems are now able to perform an increasingly diverse range of functions This text aims to provide the techniques and methods to evaluate communication systems and ensure their functionality and the quality of their design It takes a non mathematical problem solving approach and includes assessment techniques for single server queues networks of queues and stochastic petri nets
