Politics Of Fat Food And Nutrition Policy In America:

The Politics of Fat Laura S. Sims, 2016-09-16 Politics pervades every link in the food chain from the farm to the fork. It influences what foods we eat, how much they cost, what we know about them, and how safe they are. This book brings the point home by focusing on the vexing issue of dietary fat content, known to be a health menace but also an ingredient in many of our best loved foods. Through this prism, Dr. Sims explores the politics of food assistance programmes with a case study of the National School Lunch programme, agricultural policy for example, the price premium paid to farmers for milk with high butterfat content, food content with case studies of food labelling and the approval process for fat substitutes, and dietary change with a case study of nutrition education programmes. The book concludes with consideration of the costs and benefits of government intervention and nonintervention in food policy from the supply side to the demand side and its consequences for human health and happiness. *The Politics of Fat* shows how government policy affects not only breakfast, lunch, and dinner but also our between-meal snacks. It explores the nexus of health policy and agricultural policy from price supports to trade policy and is written in an accessible style enlivened by discussion, provoking case studies. **Meat Makes**

People Powerful Wilson J. Warren, 2018-02-15 From large-scale cattle farming to water pollution, meat more than any other food has had an enormous impact on our environment. Historically, Americans have been among the most avid meat eaters in the world, but long before that, meat was not even considered a key ingredient in most civilizations' diets. Labor historian Wilson Warren, who has studied the meat industry for more than a decade, provides this global history of meat to help us understand how it entered the daily diet and at what costs and benefits to society. Spanning from the nineteenth century to current and future trends, Warren walks us through the economic theory of food, the discovery of protein, the Japanese eugenics debate around meat, and the environmental impact of livestock, among other topics. Through his comprehensive, multifaceted research, he provides readers with the political, economic, social, and cultural factors behind meat consumption over the last two centuries. With a special focus on East Asia, *Meat Makes People Powerful* reveals how national governments regulated and oversaw meat production, helping transform virtually vegetarian cultures into major meat consumers at record speed. As more and more Americans pay attention to the sources of the meat they consume, Warren's compelling study will help them not only better understand the industry but also make more informed personal choices. Providing an international perspective that will appeal to scholars and nutritionists alike, this timely examination will forever change the way you see the food on your plate. **Nutritionism**

Gyorgy Scrinis, 2013-06-18 Popularized by Michael Pollan in his best-selling *In Defense of Food*, Gyorgy Scrinis's concept of nutritionism refers to the reductive understanding of nutrients as the key indicators of healthy food, an approach that has dominated nutrition science, dietary advice, and food marketing. Scrinis argues this ideology has narrowed and, in some cases, distorted our appreciation of food quality such that even highly processed foods may be perceived as healthful depending on their content of good or bad nutrients. Investigating the butter versus margarine debate

the battle between low fat low carb and other weight loss diets and the food industry's strategic promotion of nutritionally enhanced foods. Scrinis reveals the scientific, social, and economic factors driving our modern fascination with nutrition. Scrinis develops an original framework and terminology for analyzing the characteristics and consequences of nutritionism since the late nineteenth century. He begins with the era of quantification in which the idea of protective nutrients, caloric reductionism, and vitamins' curative effects took shape. He follows with the era of good and bad nutritionism, which set nutricentric dietary guidelines and defined the parameters of unhealthy nutrients, and concludes with our current era of functional nutritionism in which the focus has shifted to targeted nutrients, superfoods, and optimal diets. Scrinis's research underscores the critical role of nutrition science and dietary advice in shaping our relationship to food and our bodies and in heightening our nutritional anxieties. He ultimately shows how nutritionism has aligned the demands and perceived needs of consumers with the commercial interests of food manufacturers and corporations. Scrinis also offers an alternative paradigm for assessing the healthfulness of foods: the food quality paradigm that privileges food production and processing quality, cultural, traditional knowledge, and sensual, practical experience, and promotes less reductive forms of nutrition research and dietary advice.

Food Wars Tim Lang, Michael Heasman, 2004 This is an analysis of the impact of globalization on diet and health, which shows how the global food economy contributes to ill health and greater inequality. It argues for an alternative approach providing wholesome food and a healthy environment.

Nutrition in Public Health Sari Edelstein, 2010-09-13 Nutrition in Public Health, Third Edition, defines the state of public health nutrition and the services offered in the United States today. It provides readers with a description of public health in the U.S. through data and expertise from relevant contributing authors and discusses the active services and service agencies that are available to manage today's health issues. New to the Third Edition: Nutritional epidemiology chapter; Environmental and economic concerns of today; Food security in global terms; World hunger and the implications to public health nutrition; and public health nutrition and fitness programs and services in America.

Regulating and Managing Food Safety in the EU Harry Bremmers, Kai Purnhagen, 2018-08-01 This book analyses EU food law from a regulatory, economic, and managerial perspective. It presents an economic assessment of strategies of food safety regulation and discusses the different regulatory regimes in EU food law. It examines the challenges of food safety in the internal market as well as the regulatory tools that are available. The book's generic theorising and measurement of regulatory effects is supplemented by detailed analysis of key topics in food markets such as health claims, enforcement strategies, and induced risk management at the level of the organizations producing food. The regulatory effects discussed in the book range from classical regulatory analysis covering e.g. effects of ex ante versus ex post regulation and content-related versus information-related regulation to new regulatory options such as behavioral regulation. The book takes as its premise the idea that economic considerations are basic to the design and functioning of the European food supply arena and that economic effects consolidate or induce modification of the present legal structures and

principles The assessments analyses and examination of the various issues presented in the book serve to answer the question of how economic theory and practice can explain and enhance the shaping and modification of the regulatory framework that fosters safe and sustainable food supply chains Nutrition in Public Health Edelstein,2017-02-25

Thoroughly revised and updated Nutrition in Public Health explores the complex multifaceted array of programs and services that exist in the United States today that are dedicated to bettering population health through improved nutrition The Fourth Edition explores the subject by first considering how nutrition fits into public health and then by examining policymaking assessment and intervention methods special populations food security and program management **Routledge**
