

COMPARATIVE POLITICS: NATURE AND MAJOR APPROACHES

Comparative politics is the study and appraisal of domestic politics across countries. Comparative politics has a long and very ancient history: dating back just before the origin of systematic political studies in ancient Greece and Rome. Even ancient people compared their situations with those of other people's with whom they came in contact. The ancient Greeks performed the earliest systematic comparisons of a more modern and varied.

Comparative politics is key area in political sciences, popularised by an empirical approach based on the comparative method. To put it in another way, comparative politics is the study of the domestic politics, political institutions, and conflicts of countries. It often encompasses comparisons across countries and through time within single countries, emphasising major patterns of similarity and difference. Many political theorists like Aristot Lijphart argued that comparative politics does not have a functional form or method, instead a methodological one (Lijphart, 1977). In simple terms, comparative politics is not defined by the subject of its study, but by the method it applies to study political phenomena. Peter Hall and Richard Hall gave notable definition of comparative politics and stated that comparative politics is characterised by a combination of a substantive focus on the study of countries' political systems and a method of recognising and explaining similarities and differences between these countries using consistent models (Petra, 1996).

In the field of Comparative politics, the term politics has three connotations such as political activities, political process and political power. **Political activity** consists of the efforts by which the maintenance of conflicts are created and resolved in a way pertaining to the interest of people as far as possible rather than to their quest to struggle for power. **Political process** is an expression of political activity. **Political power** is the major topic in comparative politics. The term power has been defined by different writers. Friedrich identified power as a certain kind of human relationship. Abraham Lincoln explained power as a capacity of an individual or group of individuals to modify the conduct of other individuals in a manner which he desires (C. J. Jagers, 1992).

When applied to particular fields of study, comparative politics denotes by other names, such as comparative government (the comparative study of forms of government) or comparative foreign policy (comparing the foreign policies of different states in order to establish general empirical connections between the characteristics of the state and the characteristics of its foreign policy).

Many theories articulated that "Comparative political science" as a general term for an area of study, as opposed to a methodology of study, can be seen as redundant. The political study shows as political system often as report or fact comparison is being made.

Politics Of Nature (Harvard Univ Press) Bruno Latour, 2007-01-01 This book constitutes a continuation of Bruno Latour's concerns and themes and builds on his earlier theories He suggests in this book that science and technology need not be an enterprise that is unrelated to general society He feels that such an idea assumed to be common sensical is not actually so and using his earlier theories he proves that there is a need to look beyond such common sensical assumptions of the gap between society and science In the process of this he presents a conceptual context for political ecology and building on the experiences of sciences as they are actually practiced he suggests that what is needed is the constitution of a collective of humans and non humans

The Politics of Nature and Science in Southern Africa Maano Ramutsindela, Giorgio Miescher, 2016-08-12 This book brings together recent and ongoing empirical studies to examine two relational kinds of politics namely the politics of nature i.e. how nature conservation projects are sites on which power relations play out and the politics of the scientific study of nature These are discussed in their historical and present contexts and at specific sites on which particular human environment relations are forged or contested This spatio-temporal juxtaposition is lacking in current research on political ecology while the politics of science appears marginal to critical scholarship on social nature Specifically the book examines power relations in nature related activities demonstrates conditions under which nature and science are politicised and also accounts for political interests and struggles over nature in its various forms The ecological socio-political and economic dimensions of nature cannot be ignored when dealing with present day environmental issues Nature conservation regulations are concerned with the management of flora and fauna as much as with humans Various chapters in the book pay attention to the ways in which nature science and politics are

interrelated and also co constitutive of each other They highlight that power relations are naturalised through science and science related institutions and projects such as museums botanical gardens wetlands parks and nature reserves
