Population Ecology of the Gray Bat (*Myotis grisescens*) Jaime E. Pefaur, Merlin D. Tuttle, Ronn W. Coldiron, William Edward Duellman, Robert S. Hoffmann, 1974 **Ecology of Bats** T.H. Kunz, 2013-11-11 Among living vertebrates bats and birds are unique in their ability to fly and it is this common feature that sets them apart ecologically from other groups Bats are in some ways the nocturnal equivalents of birds having evolved and radiated into a diversity of forms to fill many of the same niches The evolution of flight and echolocation in bats was undoubtedly a prime mover in the diversification of feeding and roosting habits reproductive strategies and social behaviors Bats have successfully colonized almost every continental region on earth except Antarctica as well as many oceanic islands and archipelagos They comprise the second largest order of mammals next to rodents in number of species and probably exceed all other such groups in overall abundance Bats exhibit a dietary diversity including insects fruits leaves flowers nectar and pollen fish other vertebrates and blood unparalleled among other living mammals Their reproductive patterns range from seasonal monestry to polyestry and mating systems include promiscuity monogamy and polygyny The vast majority of what we know about the ecology of bats is derived from studies of only a few of the approximately 850 species yet in the past two decades studies on bats have escalated to a level where many important empirical patterns and processes have been identified This knowledge has strengthened our understanding of ecological relationships and encouraged hypothesis testing rather than perpetuated a catalog of miscellaneous observations *Gray Bat Recovery Plan* , 1982 Muddy Fork of Silver Creek Watershed Work Plan, Clark

County, 1993 Chiroptera of the Great Smoky Mountains Alan Rabinowitz, 1982 *Bat Ecology* Thomas H. Kunz, M. Brock Fenton, 2005 In recent years researchers have discovered that bats play key roles in many ecosystems as insect predators seed dispersers and pollinators Bats also display astonishing ecological and evolutionary diversity and serve as important models for studies of a wide variety of topics including food webs biogeography and emerging diseases In *Bat Ecology* world renowned bat scholars present an up to date comprehensive and authoritative review of this ongoing research The first part of the book covers the life history and behavioral ecology of bats from migration to sperm competition and natural selection The next section focuses on functional ecology including ecomorphology feeding and physiology In the third section contributors explore macroecological issues such as the evolution of ecological diversity range size and infectious diseases including rabies in bats A final chapter discusses conservation challenges facing these fascinating flying mammals *Bat Ecology* is the most comprehensive state of the field collection for scientists and researchers Contributors John D Altringham Robert M R Barclay Tenley M Conway Elizabeth R Dumont Peggy Eby Abigail C Entwistle Theodore H Fleming Patricia W Freeman Lawrence D Harder Gareth Jones Linda F Lumsden Gary F McCracken Sharon L Messenger Bruce D Patterson Paul A Racey Jens Rydell Charles E Rupprecht Nancy B Simmons Jean S Smith John R Speakman Richard D Stevens Elizabeth F Stockwell Sharon M Swartz Donald W Thomas Otto von Helversen Gerald S Wilkinson Michael R Willig York Winter
