*As standing-wave Matter is converted to radiant EM masses and pure energy the outputs of GEM pinches can increase dramatically over short periods*

A quasi-stellar radio source ("quasar") is a very energetic and distant active galactic nucleus.

Quasars and Blazars are extremely luminous and were first identified as being high redshift sources of electromagnetic energy, including radio waves and visible light, that were point-like, similar to stars, rather than extended sources similar to galaxies.

*The central 'core' point singularity of any GEM pinch is completely invisible and is revealed only by its effects on Matter through its interactive EM fields*

Long hypothesised as having supermassive Blackholes at their cores Tetraonics reveals Matter-Energy GEM pinches to be the source of the observed, distant large-scale stellar dynamics

*All Matter (comprised of charged Planck quanta) will accelerate according to their charge distributions as they interact with the divergent energies of EM pinches*

$$E = mc^2$$

mass-energy equivalence

Stellar GEM pinches convert Matter topologies into radiant mass-energy geometries with 100% efficiency

mass geometries are energy per  $c^2$

Matter topologies are energy per  $c^2$

Matter-energy equivalence

$$E = \frac{m}{c^2}$$
