*Organic Evolution* Richard Swann Lull, 1917      **Evolution and Revolution** Andrew Dickson White, 1890      *Lectures* Andrew Dickson White, 1890      Teaching Evolution in a Creation Nation Adam Laats, Harvey Siegel, 2016-03-03 No fight over what gets taught in American classrooms is more heated than the battle over humanity's origins For more than a century we have argued about evolutionary theory and creationism and its successor theory intelligent design yet we seem no closer to a resolution than we were in Darwin's day In this thoughtful examination of how we teach origins historian Adam Laats and philosopher Harvey Siegel offer crucial new ways to think not just about the evolution debate but how science and religion can make peace in the classroom Laats and Siegel agree with most scientists creationism is flawed as science But they argue students who believe it nevertheless need to be accommodated in public school science classes Scientific or not creationism maintains an important role in American history and culture as a point of religious dissent a sustained form of protest that has weathered a century of broad and often dramatic social changes At the same time evolutionary theory has become a critical building block of modern knowledge The key to accommodating both viewpoints they show is to disentangle belief from knowledge A student does not need to believe in evolution in order to understand its tenets and evidence and in this way can be fully literate in modern scientific thought and still maintain contrary religious or cultural views Altogether Laats and Siegel offer the kind of level headed analysis that is crucial to finding a way out of our culture war deadlock

**International Arbitration in England** Laila Hamzi, Daniel Harrison, Gregory Fullelove, 2022-08-09 There is no question that in recent years the case law practice and legal environment in which international arbitration in England is practised have all evolved and adapted to a changing world and continue to do so In this book a diverse range of practitioners chart this development with detailed consideration of the challenges and opportunities for the future of international arbitration in England The topics chosen often reflect and explore preoccupations of our times including such aspects of arbitral practice as the following challenges to arbitrators with particular attention to the Supreme Court's findings in *Halliburton v Chubb* virtual hearings diversity in international arbitration climate change arbitration green arbitration practices developing jurisprudence regarding enjoining foreign states in English proceedings recovery of in house costs in English seated international arbitrations overlapping sanctions regimes and their application to arbitral disputes in England and the role and future of third party funding The fact that the essays were all written during the COVID 19 pandemic is reflected in the procedural issues which form the focus of some chapters reminding us that when it comes change can come quickly For this reason the deeply informed insights in this volume intended as they are to ensure the continued evolution and success of international arbitration in England will prove of immeasurable value for any practitioner making submissions before an arbitral tribunal Jurists academics and students will gain invaluable perspectives on the future trajectory of the field

### **Progressive Education** Theodore Michael

Christou, 2012-01-01 Over the course of the twentieth century North American public school curricula moved away from the classics and the humanities and towards progressive subjects such as health and social studies This book delves into how progressivist thinking transformed the rhetoric and the structure of schooling during the first half of the twentieth century with echoes that reverberate strongly today and investigates historical meanings of progressive education Theodore Michael Christou closely examines the case of interwar Ontario where the entire landscape of public education including curricula and avenues to post-secondary study were radically transformed over just twenty years Christou contextualizes this reformist thinking in light of a social political and economic climate of change which seemed to demand schools that could actively relate learning to the real world Through its examination of educational journals published throughout the interwar period and previously unexplored archival sources this book illuminates how the present structure of curricula and schooling were

Zwicky, 2013-03-09 Sects 12 13 89 sequence and that subgiant and fainter stars in globular clusters have ultraviolet excesses When dealing with stars whose physical properties are imperfectly understood such as in globular cluster stars we cannot rely too heavily on the empirical calibration by the kinds of stars used to define Fig 5 to determine their true unreddened U B B V curve But if by a combination of arguments principally the reddening in the region of the stars we do know about we can assign a fairly probable unreddened U B B V curve to a group of stars about which we know little the argument may be turned around In this case some information may be gained about the energy envelope of the stars by examining the differences between the normal two color index curves for the unknown group of stars compared to the known In general there seem to be two possible causes for different stars defining different normal sequences in the U B B V plane One the relative energy

distribution in the continuum in the U B and V photometry bands are different An example of this is the effect of the Balmer depression in supergiants This of course requires deviation from black body radiation curves for one or both groups of stars This cause seems to be the dominant effect for very blue hot stars where the depression of the continuum by absorption lines is at a minimum
