Shaykh an w Jawhar was an Egyptian exegete known for having produced a scientific interpretation of the Qur n A pioneering scholar in terms of familiarising the people of his time with many previously neglected matters regarding Islam and science his publications shocked the Cairo educational system and other Muslim places of learning in the early twentieth century This book examines the intersection between an w Jawhar and Egyptian history and culture and demonstrates that his approach to science in the Qur n was intimately connected to his social concerns Divided into three parts part one contains three chapters which each introduce different aspects of an w Jawhar himself The second part explores the main aspects of his tafs r discussing his approach to science and the Qur n and how he presented Europeans in his tafs r and then addressing the impact of his tafs r on wider Muslim and non Muslim society The third section draws attention to the themes from all 114 s ras of the Qur n that are discussed within his commentary It then analyses the current status of his views and the post Jawharism perspective on science and the Qur n both today and in an imaginary future in 2154 Providing new English translations of an w Jawhar s work the book delivers a comprehensive assessment of this unique figure and emphasises the distinctive nature of his reading of the Qur n The book will be a valuable resource for anyone studying modern Egypt the Qur n Islam and Science and scientific interpretation and inimitability      **Islam and the Bible**, 2004-05-01 What are the differences between Christianity and Islam and how can we understand one another A reader

**Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures** Helaine Selin, 2013-11-11 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and

medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi
