Signal Transduction in Plant Growth and Development Desh P.S. Verma,2012-12-06 Plant growth and development is controlled by various environmental cues that are sensed by the plant via various signal transduction pathways coupled to specific response Some of these pathways are conserved from yeast to plants being regulated by various kinases and phosphatases In addition plants have many unique pathways that transduce to specific signals such as light phytohormones and oligosaccharides This volume highlights some of the examples of the plant signal transduction machinery opening new vistas in research on plant growth and development The new technologies including the use of bacteria yeast and Arabidopsis as functional complementation systems are providing proof of function of many of the proteins that show homology to those from other organisms These studies will eventually lead to improvement of crop plants and use of plants as a new resource for producing desirable products to meet the growing needs of mankind      The Hall Effect in Metals and Alloys Colin Hurd,2012-12-06 I hope this book will be useful to at least two groups of individuals the nonspecialist reader with a general knowledge of solid state science and seeking an introduction to the theory and practice of the Hall effect in metals and the specialist seeking a contemporary review of the relevant literature The literature has been surveyed thoroughly up to the middle of 1970 while the more accessible journals have been followed to late 1970 I have been selective in cases where there is a great volume of literature particularly in the case of old or obscure measurements of low accuracy but in all cases I have tried to present the reader with sufficient information to judge whether a particular reference matches his interest and is therefore worth tracing I compiled the book from reading the original publications but inevitably there will be errors arising in transcription or inadvertent omissions I hope the reader finding these will be charitable enough to write to me It is a pleasure to acknowledge the numerous useful discussions I have had at various times with associates and colleagues particularly Drs Mme M T Beal Monod J E A Alderson R D Barnard T Farrell and P Monod Their influence appears at various points in the text although of course they must not be held responsible for anything I have written
