Racism Sexism And The World System Studies In The Political Economy Of The World System:

Racism, Sexism, and the World-System Joan Smith, 1988-12-14 This is a long overdue addition to a series of books and edited collections spawned initially from Immanuel Wallerstein's *The Modern World System*. These 12 theoretically informed case studies from a 1987 conference add considerable insight to the heavy emphasis of the World Systems approaches on macroeconomic determinism with the inclusion of ideological and cultural factors. Most cases address how capital uses social categories to cheapen industrial labor costs in Asia and the US. Two illuminating chapters analyze the minoritization of immigrants and variations in masculinity norms as aspects of this labor cheapening process. *Choice*: A collection of papers presented at the Eleventh Annual Political Economy of the World System Conference; this volume illustrates the degree to which fundamental processes of the world system entail racist and sexist practices. The contributors have taken as their focus the attempt to both explain in social, political, or historical terms the pervasiveness of racism and sexism and trace the relationship between the two and the organization of the contemporary political economy. Taken together, their papers offer a more coherent treatment of the problem than has heretofore been available. By integrating an understanding of racial and sexual oppression with that of other processes that constitute the world economy, they offer new insights into the workings of the world system and new hope for concerted efforts to eliminate racism and sexism. Many of the essays included here take the form of theoretically informed case studies. Detailed historical works explore such issues as labor force formation in the New York garment industry in the late 19th and early 20th century and competition in the world textile industry in the latter half of the 1880s. A critical analysis of the construction of census categories and an examination of the myths of differential ethnic success provide real world examples of discrimination and its effects. A number of papers focus on the implications of our understanding of racial and sexual oppression for political struggle, while others assess the impact of women's exclusion from the workforce on power relationships in the home. Two major theoretical pieces address the issues in more general terms, emphasizing the circumstances under which racism and sexism are created and recreated in various contexts. Taken as a whole, the volume provides a necessary and enlightening re-examination of the role of race and gender in the world economy.

Islam and the Orientalist World-system Khaldoun Samman, Mazhar Al-Zo'by, 2015-11-17 Featuring Immanuel Wallerstein, Joseph Massad, Marnia Lazreg, and other well-known and emerging new authors, this book seeks a more accurate understanding of Islam and Islamic societies' role and relations to global cultural and economic realities. The book confronts a trend today of analyzing Islam as a cultural system that stands outside of and even predates modernity. The authors see this trend as part of a racist discourse unaware of the realities of contemporary Islam. Islamic societies today are products of the world capitalist system and cannot be understood as being separate from its forces. The authors offer a more carefully constructed and richer portrait of Islamic societies today and forcefully challenge the belief that Islam is not part of nor much affected by the modern world system.

Space and Transport in the World-System Stephen G. Bunker, Paul S. Ciccantell, 1998-02-28 Key metaphors in world system analysis are profoundly spatial but there have been few attempts to understand how space location and topography affect world system organization and process To fill this gap this book examines case studies of the restructuring of space and transport in core semiperipheral and peripheral economies It addresses such topics as the role of ocean transport in

linking terrestrially based units of the capitalist world economy the role of land transport systems in the construction and restructuring of relationships between raw materials peripheries and core economies and the role of the airplane in transforming and representing changing spatial economic and social relations in the capitalist world economy World systems theory and many other perspectives on the world economy including international political economy and analysis of globalization typically pay only limited attention to issues of space location and the role of transportation in the world economy This book identifies key theoretical and empirical issues and provides the basis for formulating research strategies to address this gap in our understanding Latino/as in the World-system Ramon Grosfoguel, Nelson Maldonado-Torres, Jose David Saldivar, 2015-11-17 Contributors Immanuel Wallerstein Enrique Dussel Walter Mignolo Agustin Lao Lewis Gordon James V Fenelon Roberto Hernandez James Cohen Santiago Slabosky Susanne Jonas and Thomas Reifer By the mid twenty first century white Euro Americans will be a demographic minority in the United States and Latino as will be the largest minority 25 percent These changes bring about important challenges at the heart of the contemporary debates about political transformations in the United States and around the world Latino as are multiracial Afro latinos Indo latinos Asian latinos and Euro latinos multi ethnic multireligious Jewish Catholic Protestant Muslim indigenous and African spiritualities and of varied legal status immigrants citizens and illegal migrants This collection addresses for the first time the potential of these diverse Latino a spiritualities origins and statuses against the landscape of decolonization of the U S economic and cultural empire in the twenty first century Some authors explore the impact of Indo latinos and Afro latinos in the United States and others discuss the conflicting interpretations and political conflicts arising from the Latinization of the United States

The World-System as Unit of Analysis Roberto Patricio Korzeniewicz, 2017-09-22 World system analyses have recast the study of between and within nation country inequality as constituent aspects of a single field of inquiry the study of inequality and social stratification as processes that always have been global in their very essence World system analyses maintain that global social stratification pivots around institutional arrangements that render distributional outcomes as simultaneously national gendered racialized and global processes This book takes stock of some of the enduring theoretical and empirical contributions of a world system perspective and identifies promising directions for future inquiry and discussion Some chapters reassess the scope and methodologies of world system analysis around several key problems e g the spatial and temporal boundaries of global commodity chains the construction and challenge of various dimensions of social inequality systemic and antisystemic social movements Others take stock of areas in which world systems are promoting methodological innovation and or generating useful global data and identify questions that demand additional methodological and empirical attention for future research In different ways this book help us to critically reconsider some of the enduring legacies within a world system perspective such as Karl Polanyi s concept of the double movement or the distinction drawn by Giovanni Arrighi or Immanuel Wallerstein between systemic and antisystemic movements As argued by many of the authors in this book a world historical approach calls for greater sensitivity to the manifold ways in which conceptual boundaries change over time and space Taking seriously the issue of unit of analysis this book explores critically productive ways for better understanding global patterns of continuity and change

Commodity Chains and Global Capitalism Gary Gereffi, Miguel Korzeniewicz, 1993-11-30 The current restructuring of the world economy under global capitalism has further integrated international trade and production It thus has brought to the fore the key role of commodity chains in the relationships of capital labor and states Commodity chains are most simply defined as the link between successive processes of manufacturing that result in a final product available for individual consumption Each production site in the chain involves organizing the acquisition of necessary raw materials plus semifinished inputs the recruitment of labor power and its provisioning arranging transportation to the next site and the construction of modes of distribution via markets and transfers and consumption The contributors to this volume explore and elaborate the global commodity chains GCCs approach which reformulates the basic conceptual categories for analyzing varied patterns of global organization and change The GCC framework allows the authors to pose questions about development issues past and present that are not easily handled by previous paradigms and to more adequately forge the macro micro links between processes that are generally assumed to be discretely contained within global national and local units of analysis The paradigm that GCCs embody is a network centered historical approach that probes above and below the level of the nation state to better analyze structure and change in the contemporary world
