Regional Sustainability Applied Ecological Economics Bridging The Gap Between Natural And Social Sciences:

Regional Sustainability Irene Ring, Bernd Klauer, Frank Wätzold, Bengt A. Mansson, 2012-12-06 This book presents interdisciplinary approaches towards achieving regional sustainability The relevance of interdisciplinary research and its consequences for economic research into the environment are elaborated and new approaches are developed to integrate knowledge from ecological and social sciences into economic research Regional Sustainability includes the development of theoretical concepts as well as applied regional case studies relating to nature conservation and agricultural policies coastal management and air pollution problems Centered around the themes of decision making processes modelling as support for policy analysis and the evaluation of policies it successfully addresses problems facing researchers and policy makers in the context of regional sustainable development The book pays special attention to human behaviour and stakeholders in decision making processes and contributes to the transition from ecological economics to socio ecological economics

Biodiversity and Ecological Economics Luca Tacconi, 2017-09-25 It is vital that we adopt interdisciplinary approaches such as ecological economics to gain an understanding of the values that determine human interaction with and use and abuse of the environment This book is a model of applied ecological economics It presents an accessible introduction to the subject while at the same time broadening its theoretical basis by introducing a post positivist participatory method The theoretical framework is applied to case studies in biodiversity conservation drawn from around the world and a range of different ecosystems The book is a suitable textbook for students of ecological economics and an ideal introduction for scientists and environmentalists needing to understand the role of economics in ecology and conservation Alternatives for Environmental Valuation Michael Getzner, Clive Spash, Sigrid Stagl, 2004-10-21 How can we value the environment this is the crucial issue that this book debates The critical analyses carried out within the book by such figures as Nick Hanley and Jonathan Aldred are vital to ensuring that future economic growth is not achieved at the expense of our environment

Evaluation for Participation and Sustainability in Planning Angela Hull, E.R. Alexander, Abdul Khakee, Johan Woltjer, 2012-03-29 Planning evaluation is required to establish the success of planning interventions both of physical developments and new approaches Yet this should not be a task undertaken purely by professionals without participation by those affected by the process and outcomes of the projects This book provides case studies and advice on how to balance conservation with economic growth the cost effectiveness of plans alongside the effects upon the community and the importance of engaging with all stakeholders involved in a project Practical aspects of the evaluation process covered include how evaluation is used in planning introducing new kinds of information or criteria alternative ways of collecting presenting information how strategic planning objectives are implemented in local practice International contributors provide empirical studies and cases of application which are of practical value to those involved in the evaluation of planning The book concludes by offering a new paradigm a locally oriented context specific participatory and multi disciplinary approach to

planning evaluation **Managing and Engineering in Complex Situations** Samuel F. Kovacic, Andres Sousa-Poza, 2013-02-15 With so many terms available to define the same thing it would seem nearly irresponsible to introduce yet another term complex situation to describe a phenomenological state of such as a system However a complex situation infers both a broader meaning and imposes a different perspective Complex in this context is dependent on understanding and reality rather than observer and knowledge Situation imposes a gestalt that cannot be characterized within a singular perspective that relegates paradox to a superior subordinate hierarchy This also infers that complex situation has no monotonic definition or each definition is by default incomplete Therefore the perennial derivations for systems such as complex systems system of systems federation of systems is no longer a sufficient descriptor for complex situation Ergo system and its genealogy lack the constitution to define complex situations The books intent is to explore this pathology through a series of papers written by authors that work in complex situations and have dealt with the limitations of the status quo systems *Waste Management, Sanitation and Society* Amrita Dwivedi, 2023-07-07 This book investigates municipal solid waste and its generation collection transportation and disposal It not only focuses on urban waste but also looks at various challenges and problems associated with the rural waste management practices adopted in Indian villages It also considers waste prevention strategies like recycling reuse and recovery which ease the burden on landfills contribute towards the conservation of natural resources and save energy The book highlights the connection between the clean water sanitation and waste management from an Indian perspective **A Beginner's Guide to Urban Design and Development** Laura B. Alvarez, 2023-04-18 This book provides invaluable guidance to all those with an interest in placemaking and the built environment from those with no experience to those who have worked for many years in industry illustrating key principles that will secure higher quality more sustainable design in accessible jargon free language The author explains the design process in a straightforward way exploring the different roles and highlighting the opportunities and limitations different agencies have to influence design over the various stages of the process Examples from the UK and worldwide look at how the system operates and how best practice can make a real difference on the ground Case studies examine situations where quality or sustainability fell short and how this could have been avoided This book also showcases a variety of evaluation tools explaining how they operate and giving guidance on how to create project specific tools to drive schemes forward With community empowerment at its core the book explains technical language and shares bountiful knowledge to broaden place democracy and make influencing design accessible to many not just a few This is a book that brings together all the various parties involved in shaping the built environment demonstrating that collaboration and mutual understanding are key to achieving better quality more sustainable design **Transportation Engineering and Planning - Volume II** Tschangho John Kim, 2009-04-15 Transportation Engineering and Planning is a component of Encyclopedia of Physical Sciences Engineering and Technology Resources in the global Encyclopedia of Life Support Systems EOLSS which is

an integrated compendium of twenty one Encyclopedias The Theme on Transportation Engineering and Planning presents the readers with diverse sources of information and knowledge about transportation engineering and planning to help ensure that informed actions are compatible with sustainable world development It begins with a historical analysis of transportation development since an understanding of how transportation technologies developed is a prerequisite for understanding issues involved in transportation systems and for developing sound policy analysis Next the various chapters analyze transportation problems discusses the state of public policy addressing those problems considers the causes and effects of changes in demand for mobility as the socio economic environment changes and then deals with the fundamental questions related to transportation These two volumes are aimed at the following a wide spectrum of audiences from the merely curious to those seeking in depth knowledge University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers and NGOs

Bridging the Gap Between Policy and Science in Assessing the Health Status of Marine Ecosystems, 2nd Edition Angel Borja, Michael Elliott, María C. Uyarra, Jacob Carstensen, Marianna Mea, 2017-03-22 Marine management requires approaches which bring together the best research from the natural and social sciences It requires stakeholders to be well informed by

science and to work across administrative and geographical boundaries a feature especially important in the inter connected marine environment Marine management must ensure that the natural structure and functioning of ecosystems is maintained to provide ecosystem services Once those marine ecosystem services have been created they deliver societal goods as long as society inputs its skills time money and energy to gather those benefits However if societal goods and benefits are to be limitless society requires appropriate administrative legal and management mechanisms to ensure that the use of such benefits do not impact on environmental quality but instead support its sustainable use *American Book Publishing Record* ,1999

The Geography of Beer Mark W. Sustainable Ecological Agriculture in China Tian Shi,2010 Ecological economics emphasizes the two way interdependencies between the micro and macro levels Although the questions about ecological agricultural research arise from the local level their answers may lie at higher levels within the realm of political economy Therefore it requires substantial research not only on the links between local production systems and the larger national economy political structures and decision making processes but also the role and limitations of the national and local authorities in policy development and implementation There is also scant research on Chinese ecological agriculture published in English This book helps fill the void It employs a trans disciplinary approach to investigate the connection and discrepancy between knowledge and actions It presents methodological perspectives and practical suggestions for the comprehensive analysis of ecological agriculture as inputs to improved agricultural policy making for sustainability practices In this way this book illuminates the possibility of bridging the gap between local level implementation and the larger political economic processes This book helpfully provides a comprehensive analytical framework within which agricultural sustainability can be better analyzed and understood by articulating ecological economics as a policy science to guarantee transparency and fairness in the decision making process It shows the important role that traditional culture can play in promoting ecologically and socially sound development It further emphasizes the imperative to move the ideology of ecological agriculture into the political realm and promotes a continuous dialogue between researchers practitioners and policy makers It also suggests that local government has a significant role to play in establishing appropriate institutional arrangements and policy settings e g bottom up policy initiatives for sustainable ecological agricultural development By elaborating on the methodological synthesis of ecological economics and system dynamics modeling as a holistic approach to facilitate an improved policy making process for agricultural sustainability this book demonstrates the effectiveness of this alternative approach to

improve policy making process and facilitate the realization of sustainability through a case study in China This book will be an important resource not only to those interested in China but also to scholars and policy makers around the world because of its global relevance in the areas of ecological economics ecological agriculture sustainable resource management political economy system dynamics thinking and modeling and participation in the policy making process Handbook of Research methods and Applications in Environmental Studies Matthias Ruth,2015-08-28 This Handbook presents methods to advance the understanding of interdependencies between the well being of human societies and the performance of their biophysical environment It showcases applications to material and energy use urbanization and tech **Non-doctrinal Research**

Methods in Environmental Law Paul Martin,Solange Teles da Silva,Marcia Leuzinger,Miriam Verbeek,Andrew Lawson,2023-09-06 This timely book explores the innovative non doctrinal methods currently being used in environmental law research Drawing on their extensive experience expert contributors provide insight into how creative approaches to research can improve understanding of law and policy leading to more effective legal protection for the environment

Sustainability in the Maritime Domain Angela Carpenter,Tafsir M. Johansson,Jon A. Skinner,2021-05-29 This volume explores options for a sustainable maritime domain including maritime transportation such as Maritime Spatial Planning MSP maritime education and training maritime traffic and advisory systems maritime security Other activities in the maritime domain covered in the book include small scale fisheries and sustainable fisheries and greening the blue economy The book aims to provide the building blocks needed for a framework for good ocean governance a framework that will serve through the next decade and hopefully well beyond the 2030 milestone of the UN Agenda for Sustainable Development In short this book brings together the problems of the current world and sustainable solutions that are in the development process and will eventually materialize in the not so distant future Additionally the book presents a trans disciplinary analysis of integral sustainable maritime transportation solutions and crucial issues relevant to good ocean governance that have recently been discussed at different national regional and international fora highlighting ongoing work to develop and support governance systems that facilitate industry requirements and meet the needs of coastal states and indigenous peoples of researchers of spatial planners and of other sectors dependent on the oceans The book will be of interest to researchers across many disciplines especially those that are engaged in cross sectoral research and developments in the maritime transport sector and across the wider maritime domain To this end the book covers areas including natural and social sciences geographical studies spatial planning maritime security and gender studies as they relate to transport and the wider maritime sector In addition the book explores frameworks for sustainable ocean governance being developed under the UN s Agenda for Sustainable Development to 2030 It will also look beyond the 2030 milestone under that Agenda and will be of use to national and international policymakers and practitioners government actors at the EU and other regional and national levels and to researchers of ocean governance sustainability and management and maritime transport *Graduate*
