King,Jakob A. Klein,2025-03-04 An edited collection that explores the multifaceted experiences of Chinese culinary modernity both within and outside of mainland China from the mid 19th century to present Modern Chinese Foodways defines some of the major processes by which Chinese food and foodways have become modern with a focus on the period from the mid nineteenth to the twenty first century The editors Jia Chen Fu Michelle T King and Jakob A Klein highlight four prominent areas of change commodification of food production the scientization of expertise and the development of new food technologies the creation of new culinary identities based on gender ethnicity and nation and the circuits of migration taking place since the nineteenth century This collection argues that Chinese food and foodways are very much modern not a given in the face of the chorus of voices that insists on emphasizing its ancient roots in ways that both recall the experiences of other cultures as well as in ways unique to China's own historical trajectory The book combines incisive original scholarship by thirteen leading voices in the field with editorial essays on the past and future of Chinese food studies to frame the field of inquiry for the next generation of Chinese food studies scholars Demonstrating the significance of modern Chinese foodways to the phenomenon of culinary modernity writ large which is still largely shaped by Euro American perspectives and priorities Modern Chinese Foodways is the first book of its kind **Chop Fry Watch Learn** Michelle T. dramatic change in our eating patterns and lifestyle aided by agricultural and industrial revolution globalisation and urbanisation and emergence of associated diet related chronic diseases such as obesity coronary heart disease hypertension diabetes some type of cancer stroke and degenerative arthritis The science of food and nutrition is very complex Nutrition science like many other fields of science is evolutionary and there are always conflicting research outcomes that need to be carefully evaluated We ingest hundreds of dietary components every day and understanding various metabolic pathways and the effect of interactions of various dietary components in vivo is rather challenging Recent advances in genetic research fostered the emergence of new disciplines such as nutrigenomics proteomics metabolomics and transcriptomics which can shed light on the molecular level interaction between dietary nutrients and the genome These technologies provide the vision for future nutrition research that may unravel how the diet genome interactions modifies the phenotype Food may not be the overall cure for the treatment of every possible disease but the importance of food in both causing and relieving certain problems cannot be neglected This is one of the most researched topics and there is a lot written about it However this book is probably the only text that provides up to date information on the various interrelated topics on food and nutrition that would be of interest to wider community
