Multi-relational data mining

- Existing mining software assume data in a single relation
- Real-life data over multiple relations
- Existing tools rely on manual preprocessing before commencing mining, this is time-consuming and in-accurate.
- Design and implement mining algorithms for multi-relational data

Relational Data Mining:

   Relational Data Mining Saso Dzeroski,2001-08 As the first book devoted to relational data mining this coherently written multi author monograph provides a thorough introduction and systematic overview of the area The first part introduces the reader to the basics and principles of classical knowledge discovery in databases and inductive logic programming subsequent chapters by leading experts assess the techniques in relational data mining in a principled and comprehensive way finally three chapters deal with advanced applications in various fields and refer the reader to resources for relational data mining This book will become a valuable source of reference for R D professionals active in relational data mining Students as well as IT professionals and ambitioned practitioners interested in learning about relational data mining will appreciate the book as a useful text and gentle introduction to this exciting new field   *Multi-Relational Data Mining* B.L.J. Kaczmarek,A.J. Knobbe,2006-08-25 With the increased possibilities in modern society for companies and institutions to gather data cheaply and efficiently the subject of Data Mining has become of increasing importance This interest has inspired a rapidly maturing research field with developments both on a theoretical as well as on a practical level with the availability of a range of commercial tools Unfortunately the widespread application of this technology has been limited by an important assumption in mainstream Data Mining approaches This assumption all data resides or can be made to reside in a single table prevents the use of these Data Mining tools in certain important domains or requires considerable massaging and altering of the data as a pre processing step This limitation has spawned a relatively recent interest in richer Data Mining paradigms that do allow structured data as opposed to the traditional flat representation This publication goes into the different uses of Data Mining with Multi Relational Data Mining MRDM the approach to Structured Data Mining as the main subject of this book   Granular-Relational Data Mining Piotr Hońko,2017-02-03 This book provides two general granular computing approaches to mining relational data the first of which uses abstract descriptions of relational objects to build their granular representation while the second extends existing granular data mining solutions to a relational case Both approaches make it possible to perform and improve popular data mining tasks such as classification clustering and association discovery How can different relational data mining tasks best be unified How can the construction process of relational patterns be simplified How can richer knowledge from relational data be discovered All these questions can be answered in the same way by mining relational data in the paradigm of granular computing This book will allow readers with previous experience in the field of relational data mining to discover the many benefits of its granular perspective In turn those readers familiar with the paradigm of granular computing will find valuable insights on its application to mining relational data Lastly the book offers all readers interested in computational intelligence in the broader sense the opportunity to deepen their understanding of the newly emerging field granular relational data mining   *Relational Data Mining* Saso Dzeroski,Nada Lavra,2014-01-15   DATA MINING FOR RULE DISCOVERY IN RELATIONAL DATABASES. ,2004 Data is

mostly stored in relational databases today However most data mining algorithms are not capable of working on data stored in relational databases directly Instead they require a preprocessing step for transforming relational data into algorithm specified form Moreover several data mining algorithms provide solutions for single relations only Therefore valuable hidden knowledge involving multiple relations remains undiscovered In this thesis an implementation is developed for discovering multi relational association rules in relational databases The implementation is based on a framework providing a representation of patterns in relational databases refinement methods of patterns and primitives for obtaining necessary record counts from database to calculate measures for patterns The framework exploits meta data of relational databases for pruning search space of patterns The implementation extends the framework by employing Apriori algorithm for further pruning the search space and discovering relational recursive patterns Apriori algorithm is used for finding large itemsets of tables which are used to refine patterns Apriori algorithm is modified by changing support calculation method for itemsets A method for determining recursive relations is described and a solution is provided for handling recursive patterns using aliases Additionally continuous attributes of tables are discretized utilizing equal depth partitioning The implementation is tested with gene localization prediction task of KDD Cup 2001 and results are compared to those of the winner approach

Relational data mining Sašo Džeroski,2006   **Multi-relational Data Mining** Arno J. Knobbe,Centrum voor Wiskunde en Informatica (Amsterdam, Netherlands),1999   **Data Mining in Finance** Boris Kovalerchuk,Evgenii Vityaev,2005-12-11 Data Mining in Finance presents a comprehensive overview of major algorithmic approaches to predictive data mining including statistical neural networks ruled based decision tree and fuzzy logic methods and then examines the suitability of these approaches to financial data mining The book focuses specifically on relational data mining RDM which is a learning method able to learn more expressive rules than other symbolic approaches RDM is thus better suited for financial mining because it is able to make greater use of underlying domain knowledge Relational data mining also has a better ability to explain the discovered rules an ability critical for avoiding spurious patterns which inevitably arise when the number of variables examined is very large The earlier algorithms for relational data mining also known as inductive logic programming ILP suffer from a relative computational inefficiency and have rather limited tools for processing numerical data Data Mining in Finance introduces a new approach combining relational data mining with the analysis of statistical significance of discovered rules This reduces the search space and speeds up the algorithms The book also presents interactive and fuzzy logic tools for mining the knowledge from the experts further reducing the search space Data Mining in Finance contains a number of practical examples of forecasting S P 500 exchange rates stock directions and rating stocks for portfolio allowing interested readers to start building their own models This book is an excellent reference for researchers and professionals in the fields of artificial intelligence machine learning data mining knowledge discovery and applied mathematics

A NEW HYBRID MULTI-RELATIONAL DATA MINING TECHNIQUE. ,2005 Multi relational learning has become popular due to the limitations of propositional problem definition in structured domains and the tendency of storing data in relational databases As patterns involve multiple relations the search space of possible hypotheses becomes intractably complex Many relational knowledge discovery systems have been developed employing various search strategies search heuristics and pattern language limitations in order to cope with the complexity of hypothesis space In this work we propose a relational concept learning technique which adopts concept descriptions as associations between the concept and the preconditions to this concept and employs a relational upgrade of association rule mining search heuristic APRIORI rule to effectively prune the search space The proposed system is a hybrid predictive inductive logic system which utilizes inverse resolution for generalization of concept instances in the presence of background knowledge and refines these general patterns into frequent and strong concept definitions with a modified APRIORI based specialization operator Two versions of the system are tested for three real world learning problems learning a linearly recursive relation predicting carcinogenicity of molecules within Predictive Toxicology Evaluation PTE challenge and mesh design Results of the experiments show that the proposed hybrid method is competitive with state of the art systems   An Approach to Data Mining of Relational Data Warehouse Sudhir Reddy Nimmakayala,2011   Multi-relational Data Mining Using Vertical Database Technology Qiang Ding,2004   **Logical and Relational Learning** Luc De Raedt,2008-09-12 This first textbook on multi relational data mining and inductive logic programming provides a complete overview of the field It is self contained and easily accessible for graduate students and practitioners of data mining and machine learning   Relational Data Mining Standard Requirements Gerardus Blokdyk,2018-04-16 In a project to restructure Relational data mining outcomes which stakeholders would you involve How does the organization define manage and improve its Relational data mining processes What will be the consequences to the stakeholder financial reputation etc if Relational data mining does not go ahead or fails to deliver the objectives Does our organization need more Relational data mining education How do we go about Comparing Relational data mining approaches solutions Defining designing creating and implementing a process to solve a challenge or meet an
