**Learning, Unlearning and Re-Learning Curves** Alan Jones, 2018-09-13 Learning Unlearning and Re learning Curves Volume IV of the Working Guides to Estimating Forecasting series focuses in on Learning Curves and the various tried and tested models of Wright Crawford DeJong Towill Bevis and others It explores the differences and similarities between the various models and examines the key properties that Estimators and Forecasters can exploit A discussion about Learning Curve Cost Drivers leads to the consideration of a little used but very powerful technique of Learning Curve modelling called Segmentation which looks at an organisation s complex learning curve as the product of multiple shallower learning curves Perhaps the biggest benefit is that it simplifies the calculations in Microsoft Excel where there is a change in the rate of learning observed or expected The same technique can be used to model and calibrate discontinuities in the learning process that result in setbacks and uplifts in time or cost This technique is compared with other better known techniques such as Anderlohr s Equivalent Unit Learning is another relative new technique that can be

used alongside traditional completed unit learning to give an early warning of changes in the rates of learning Finally a Learning Curve can be exploited to estimate the penalty of collaborative working across multiple partners Supported by a wealth of figures and tables this is a valuable resource for estimators engineers accountants project risk specialists as well as students of cost engineering

**Patient H69** Vanessa Potter,2017-05-04 Imagine how it would feel to one day wake up and find your vision descending swiftly into darkness Your fingertips are turning numb and as the world closes in around you you realise there is nothing you can do to stop it This is what happened to Vanessa Potter In the space of 72 hours Vanessa went from juggling a high flying career as a producer and caring for her two small children to being completely blind unable to walk and with her sense of touch completely gone Over the course of the next six months Vanessa slowly began to recover Opening her eyes onto a black and white world with mutating shapes and colours that crackled and fizzled she encountered a visual landscape that was completely unrecognisable As colour reappeared Vanessa experienced a range of bizarre phenomena as her confused brain tried to make sense of the world around her and she found herself touching and talking to inanimate objects in order to stimulate her vision all part of her brain s mechanism for coping with the trauma of sensory loss Going blind led Vanessa to turn science sleuth reinventing herself as Patient H69 to uncover the reality behind her unique condition With the help of a team of psychologists and neuroscientists we follow her story as she learns the science of herself making discoveries that will positively change the course of her life Vanessa s account is raw and candid but ultimately upbeat It shows how this remarkable woman opened doors by transforming her terrifying experience into an inspirational and scientifically fascinating endeavour British Medical Journal ,1924
