Transition of HPC Towards Exascale Computing E.H. D'Hollander,2013-10-22 The US Europe Japan and China are racing to develop the next generation of supercomputers exascale machines capable of 10 to the 18th power calculations a second by 2020 But the barriers are daunting the challenge is to change the paradigm of high performance computing The 2012 biennial high performance workshop held in Cetraro Italy in June 2012 focused on the challenges facing the computing research community to reach exascale performance in the next decade This book presents papers from this workshop arranged into four major topics energy scalability new architectural concepts and programming of heterogeneous computing systems

Chapter 1 introduces the status of present supercomputers which are still about two orders of magnitude separated from the exascale mark Chapter 2 examines energy demands a major limiting factor of today's fastest supercomputers the quantum leap in performance required for exascale computing will require a shift in architectures and technology In Chapter 3 scalable computer paradigms for dense linear algebra on massive heterogeneous systems are presented and Chapter 4 discusses architectural concepts Finally Chapter 5 addresses the programming of heterogeneous systems This book will be of interest to all those wishing to understand how the development of modern supercomputers is set to advance in the next decade
