**Fine Pitch Surface Mount Technology** Phil Marcoux,2013-11-27 Fine pitch high lead count integrated circuit packages represent a dramatic change from the conventional methods of assembling electronic components to a printed interconnect circuit board To some these

FPT packages appear to be an extension of the assembly technology called surface mount or SMT. Many of us who have spent a significant amount of time developing the process and design techniques for these fine pitch packages have concluded that these techniques go beyond those commonly used for SMT. In 1987 the present author convinced of the uniqueness of the assembly and design demands of these packages chaired a joint committee where the members agreed to use fine pitch technology FPT as the defining term for these demands. The committee was unique in several ways one being that it was the first time three U S standards organizations the IPC Lincolnwood IL the EIA Washington D C and the ASTM Philadelphia came together to create standards before a technology was in high demand. The term fine pitch technology and its acronym FPT have since become widely accepted in the electronics industry. The knowledge of the terms and demands of FPT currently exceed the usage of FPT packaged components but this is changing rapidly because of the size performance and cost savings of FPT. I have resisted several past invitations to write other technical texts. However I feel there are important advantages and significant difficulties to be encountered with FPT.

of debt climate swaps accrue to non participating creditors they are generally less efficient forms of support than conditional grants and or broad debt restructuring which could be linked to climate adaptation when the latter significantly reduces credit risk This said debt climate swaps could be superior to conditional grants when they can be structured in a way that makes the climate commitment de facto senior to debt service and they could be superior to comprehensive debt restructuring in narrow settings when the latter is expected to produce large economic dislocations and the debt climate swap is expected to materially reduce debt risks and achieve debt sustainability Furthermore debt climate swaps could be useful to expand fiscal space for climate investment when grants or more comprehensive debt relief are just not on the table The paper explores policy actions that would benefit both debt climate swaps and other forms of climate finance including developing markets for debt instruments linked to climate performance
