Prospects for wood-based electricity for the Indonesian National Energy Policy Pirard, R., Bär, S., Cahyat, A., Dermawan, A., 2017-08-18 To achieve the target of 23%

renewable energy by 2020 Indonesia has been actively exploring options to loosen its dependence on fossil fuels While biofuels have been developing fast and remain a priority for the government wood based energy also holds great potential This report is a first attempt to assess its state of development and feasibility Wood based energy could be based on the high profile large scale industrial tree plantation program in Indonesia This is one of the largest in the world with millions of hectares planted but it has failed to achieve all of its public objectives The government envisions its revival with bioenergy as an alternative to the mature pulp and paper market To do so a flagship feed in tariff policy has been put in place as an incentive for power plants to using biomass or biogas material Our research based on intensive interactions with stakeholders at all levels secondary data and three case studies leads to one straightforward message that this source of energy is not going to represent a significant share of the energy mix for a long time Major obstacles include the difficulty in establishing and managing large scale tree plantations dedicated to energy production with recurrent claims and conflicts on the ground the inability of the feed in tariff policy to compensate investors for the risks of shifting to a new type of energy the absence of subsidies provided to the state owned electricity company that sees little interest in buying relatively expensive power and the lack of proof of concept that lowers the probability of significant investments in this field Electrical Energy Generation in Europe Jorge Morales Pedraza,2015-04-21 The present book maximizes reader insights into the current and future roles to be played by different types of renewable energy sources and nuclear energy for the purpose of electricity generation in the European region as a whole and in a select group of European countries specifically This book includes detailed analysis of the different types of renewable energy sources available in different European countries the pros and cons of the use of the different types of renewables and nuclear energy for electricity generation which energy options are available in the different European countries to expand their energy sector in the coming years the impact on the climate and the environment levels of production and consumption and the level of electricity generated by these energy sources amongst others Designed to inform government officials economists scientists and the private and public power industry of the key issues surrounding the future role of different renewable energy sources and nuclear energy in the production of electricity within the European region this book will also describe in detail the evolution of the electrical energy sector in the chosen European region and the problems that several countries are now experiencing in the face of increasing demand for electricity **Renewable Energy Conversion: Technologies and Applications** Dr. Angesh Chandra, Dr. Premendra Janardan Bansod , Dr. Puran Saw , Prof. Akshay Anand ,2025-08-30 Renewable Energy Conversion Technologies and Applications explores modern advancements in harnessing solar wind biomass hydro and geothermal resources It highlights conversion principles system design storage integration and efficiency optimization Covering practical applications and emerging innovations the book provides insights for researchers engineers and policymakers driving sustainable energy transitions worldwide *Renewable Energy Sources and Technology via Project-Based Learning* Mardiana Idayu Ahmad,Md
