Structures and Algorithms Jens Erik Fenstad,2018-03-10 This book explains exactly what human knowledge is The key concepts in this book are structures and algorithms i.e. what the readers see and how they make use of what they see Thus in comparison with some other books on the philosophy or methodology of science which employ a syntactic approach the author's approach is model theoretic or structural Properly understood it extends the current art and science of mathematical modeling to all fields of knowledge The link between structure and algorithms is mathematics But viewing mathematics as such a link is not exactly what readers most likely learned in school thus the task of this book is to explain what mathematics should actually mean Chapter 1 an introductory essay presents a general analysis of structures algorithms and how they are to be linked Several examples from the natural and social sciences and from the history of knowledge are provided in Chapters 2-6 In turn Chapters 7 and 8 extend the analysis to include language and the mind Structures are what the readers see And as abstract cultural objects they can almost always be seen in many different ways But certain structures such as natural numbers and the basic theory of grammar seem to have an absolute character Any theory of knowledge grounded in human culture must explain how this is possible The author's analysis of this cultural invariance combining insights from evolutionary theory and neuroscience is presented in the book's closing chapter The book will be of interest to researchers students and those outside academia who seek a deeper understanding of knowledge in our present day society
