Methods for Risk Assessment of Transgenic Plants Klaus Ammann, Yolande Jacot, Gösta Kjellsson, Vibeke Simonsen, 1999-10-25 The Berne Symposium invited leading scientists of risk assessment research with transgenic crops on an international level in order to enhance the discussion regulators and members of the biotech industry The goal was to determine the status quo and also to make progress in times of a first global spread of transgenes in agrosystems about risk assessment The dialogue between scientists regulators and industry representatives also revealed some lacunes of risk assessment research which will have to be filled in the future We still lack longterm experience for which we will have to collect data with scientific precision The symposium concluded asking for a risk oriented longterm monitoring system based on critical science and hard data This volume presents the discussion sessions as well as the scientific contributions and thus mirrors the risk assessment debate based not on exaggerated negative scenarios but on critical science and hard data

Methods for Risk Assessment of Transgenic Plants Klaus Ammann, Yolande Jacot, Richard Braun, 2012-12-06 For centuries TK has been used almost exclusively by its creators that is indigenous and local communities Access to use of and handing down of TK has been regulated by local laws customs and traditions Some TK has been freely accessible by all members of an indigenous or local community and has been freely exchanged with other communities other TK has only been known to particular individuals within these communities such as shamans and has been handed down only to particular individuals of the next generation Over many generations indigenous and local communities have accumulated a great deal of TK which has generally been adapted developed and improved by the generations that followed For a long time Western anthropologists and other scientists have generally been able to freely access TK and have documented it in their works Still this TK was only seldom used outside the indigenous and local communities that created it

More recently however Western scientists have become aware that TK is neither outdated nor valueless knowledge but instead 1 can be useful to solve some of the problems facing today s world Modern science for example has shown an increased interest in some forms of TK as knowledge that can be used in 4 research and development R D activities and be integrated in modern innovations This holds especially true for TK regarding genetic resources which has been integrated in modern 6 pharmaceuticals s agro chemicals and seed
