Methods In Membranebiology Volume 5 Transport:

Methods in Membrane Biology Edward Korn, 2012-12-06 Many of the methods now in general use in membrane biology and not already discussed in satisfactory detail elsewhere have been covered in the eight previously published volumes of this series Much of this ninth volume is occupied by one authoritative chapter an unusually thorough and critical review of a relatively new and highly specialized technology that has gained rapid acceptance immunofluorescence and immunoelectron microscopy These are powerful experimental tools applicable in fields much broader than membrane research and employing methods drawn from widely diverse disciplines such as organic chemistry protein chemistry immunology and fluorescence and electron microscopy The temptation to use these superficially and deceptively simple but fundamentally complex methods uncritically is almost overwhelming The chapter by de Petris a pioneer in the field is as necessary as it is rigorous and it should long be the standard in this area of research The second chapter in this volume is a more specialized review by Matus of the procedures for the preparation and characterization of the highly differentiated junctional regions of brain plasma membranes These methods are central to the rapidly growing field of neurobiochemistry membrane biochemistry at perhaps its most intricate

Methods in Membrane Biology Edward D. Korn, 2013-04-17 Less than a year before this writing a Nobel Prize was shared by Albert Claude Christian de Duve and George Palade pioneers in the development of modern cell biology of which membrane biology is an integral part For many years a seemingly unbridgeable gap separated the physiologist working at the organ level from the biochemist studying the molecular composition of cell constituents and the chemical reactions that occur in water soluble extracts of cells Physiology has a long history and the disciplines epitomized by intermediary metabolism and molecular biology progressed rapidly during the 1950s and 1960s Meanwhile electron microscopists painstakingly mapped the newly discovered intracellular world of membranes organelles microtubules and microfilaments and other scientists developed techniques for the quantitative separation and characterization of these intracellular structures Thus it finally became possible to localize the many enzymes and the metabolic activities they catalyze to recognizable structures whose composition and organization can be studied We are now well on our way to bridging that gap between biochemistry and physiology to understanding how the cell functions

Methods in Membrane Biology, 1976 Electrochemistry H. R. Thirsk, 1989-03-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research Written by experts in their specialist fields the series creates a unique service for the active research chemist supplying regular critical in depth accounts of progress in particular areas of chemistry For over 80 years the Royal Society of Chemistry and its predecessor the Chemical Society have been publishing reports charting developments in chemistry which originally took the form of Annual Reports However by 1967 the whole spectrum of chemistry could no longer be contained within one volume and the series Specialist Periodical Reports was born The Annual Reports themselves still existed but were divided into two

and subsequently three volumes covering Inorganic Organic and Physical Chemistry For more general coverage of the highlights in chemistry they remain a must Since that time the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry Some titles have remained unchanged while others have altered their emphasis along with their titles some have been combined under a new name whereas others have had to be discontinued **Molecular**

Biology of Membrane Transport Disorders Thomas E. Andreoli,A.M. Brown,D.M. Fambrough,Joseph F. Hoffman,Stanley G. Schultz,Michael J. Welsh,2013-11-11 When the six of us gathered to start planning for what was to be the Third Edition of Physiology of Membrane Disorders it was clear that since 1986 when the Second Edition appeared the field had experienced the dawning of a new era dominated by a change in focus from phenomenology to underlying mechanisms propelled by the power of molecular biology In 1985 detailed molecular information was available for only three membrane transporters the lac permease bacterial rhodopsin and the acetylcholine receptor During the decade that has since elapsed almost all of the major ion channels and transport proteins have been cloned sequenced mutagenized and expressed in homologous as well as heterologous cells Few if any of the transporters that were identified during the previous era have escaped the probings of the new molecular technologies and in many instances considerable insight has been gained into their mechanisms of function in health and disease Indeed in some instances novel unexpected transporters have emerged that have yet to have their functions identified The decision to adopt the new title Molecular Biology of Membrane Transport Disorders was a natural outgrowth of these considerations **Symposium on the Pharmacological Effect of Lipids** Jon J. Kabara,1978

Biophysical Approaches Edward D. Korn,2013-04-17 The short period since the publication of Volume 1 of Methods in Membrane Biology has been a time of momentous progress Calorimetry electron spin and nuclear magnetic resonance X ray diffraction and freeze cleavage electron microscopy reinforced by biochemical analyses and enzymatic studies have led to universal acceptance of a generalized membrane model All membrane biologists would agree that a major element of all biological membranes is a bilayer of phospholipids which in some instances also contains other lipids notably sterols and glycolipids The fatty acid composition of the lipids of most membranes is such that the lipids are above their transition temperatures in their normal environment so that the bilayer is fluid The microviscosity of the fatty acyl groups decreases progressively down the chain so that at the hydrocarbon interior of the bilayer the lipid phase has a viscosity approximating that of olive oil at room temperature As a consequence of this membrane fluidity a phospholipid molecule is very mobile within the plane of the membrane moving a distance of about 1.2 μm in 1 s but the movement of a phospholipid molecule from one side of the membrane bilayer to the other flip flop is very slow The lipid bilayer is an essentially inert and rather impermeable structure as shown by many studies with model systems Proteins of course provide the catalytic components of the membranes as well as playing a significant structural role *Published Scientific Papers of the National Institutes of Health* National Institutes of Health (U.S.),1975 Each issue lists papers published during the preceding year **Scientific**

Directory and Annual Bibliography National Institutes of Health (U.S.),1974 Each issue lists papers published during the preceding year Patch Clamp Technique Fatima Shad Kaneez,2012-03-23 This book is a stimulating and interesting addition to the collected works on Patch clamp technique Patch Clamping is an electrophysiological technique which measures the electric current generated by a living cell due to the movement of ions through the protein channels present in the cell membrane The technique was developed by two German scientists Erwin Neher and Bert Sakmann who received the Nobel Prize in 1991 in Physiology for this innovative work Patch clamp technique is used for measuring drug effect against a series of diseases and to find out the mechanism of diseases in animals and plants It is also most useful in finding out the structure function activities of compounds and drugs and most leading pharmaceutical companies used this technique for their drugs before bringing them for clinical trial This book deals with the understanding of endogenous mechanisms of cells and their receptors as well as advantages of using this technique It covers the basic principles and preparation types and also deals with the latest developments in the traditional patch clamp technique Some chapters in this book take the technique to a next level of modulation and novel approach This book will be of good value for students of physiology neuroscience cell biology and biophysics
