

A HEREDITARILY INDECOMPOSABLE BANACH SPACE WITH RICH SPREADING MODEL STRUCTURE

SPIROS A. ARGYROS, PAVLOS MOTAKIS

ABSTRACT. We present a reflexive Banach space X_{∞} which is Hereditarily Indecomposable and satisfies the following properties. In every subspace Y of X_{∞} , there exists a weakly null normalized sequence $\{y_n\}_n$, such that every subsymmetric sequence $\{z_n\}_n$ is isomorphically generated as a spreading model of a subsequence of $\{y_n\}_n$. Also, in every block subspace Y of X_{∞} , there exists a seminormalized block sequence $\{z_n\}$ and $T : X_{\infty} \rightarrow X_{\infty}$ an isomorphism such that for every $n \in \mathbb{N}$ $T(z_{2n-1}) = z_{2n}$. Thus the space is an example of an HI space which is not tight by range in a strong sense.

INTRODUCTION

The aim of the present paper is to exhibit a space with the properties described in the abstract. The norming set W of the space X_{∞} is saturated with constraints and it is very similar to the corresponding one in [3]. As it is pointed out in [3] the method of saturation under constraints is suitable for defining spaces with hereditary heterogeneous structure ([15], [16]). The basic ingredients of the norming set W are the following. First the unconditional frame is the ball of the dual T^* of Tsirelson space [9, 19]; namely W is a subset of B_{T^*} which satisfies the following properties. As in [3] it is closed in the operations $(\frac{1}{\gamma}x, \mathcal{S}_\alpha, \alpha)$, $(\frac{1}{\gamma}x, \mathcal{S}_\alpha, \beta)$ which create the type I_α , type I_β functionals respectively. Furthermore it includes two types of special functionals denoted as type II_+ and type II_- functionals. The type II_- functionals are designed to impose the rich spreading model structure in the space X_{∞} , while the type II_+ functionals serve a double purpose. First they are a tool for finding c_0 spreading models in every subspace of X_{∞} . The c_0 spreading models are the fundamental initial ingredient for the ultimate construction. The second role of the type II_+ functionals is to show that the space X_{∞} is not tight by range. We recall that recently V. Ferenczi and Th. Schlumprecht have presented in [8] a variant of Gowers-Maurey HI space ([11]) which is HI and not tight by range.

Since the norming set W is similar to the one in [3] many of the critical norm evaluations in the present paper are identical with the corresponding ones in [3]. The main difference of the present construction from the one
