Methods to Estimate Aquatic Habitat Variables Karen Hamilton, 1984 **Wetland and Riparian Areas of the Intermountain West** Mark C. McKinstry, Wayne A. Hubert, Stanley H. Anderson, 2004-07-01

Wetlands and riparian areas between the Rocky Mountains and the Sierra Nevada are incredibly diverse and valuable habitats. More than 80 percent of the wildlife species in this intermountain region depend on these wetlands which account for less than 2 percent of the land area for their survival. At the same time the wetlands also serve the water needs of ranchers and farmers, recreationists, vacation communities and cities. It is no exaggeration to call water the liquid gold of the West and the burgeoning human demands on this scarce resource make it imperative to understand and properly manage the wetlands and riverine areas of the Intermountain West. This book offers land managers, biologists and research scientists a state of the art survey of the ecology and management practices of wetland and riparian areas in the Intermountain West. Twelve articles examine such diverse issues as laws and regulations affecting these habitats, the unique physiographic features of the region, the importance of wetlands and riparian areas to fish, wildlife and livestock, the ecological function of these areas, their value to humans and the methods to evaluate these habitats. The authors also address the human impacts on the land from urban and suburban development, mining, grazing, energy extraction, recreation, water diversions and timber harvesting and suggest ways to mitigate such impacts. In addition to the editors, the contributors to this volume are: Paul Adamus, Oregon State University, Corvallis; Michael A. Bozek, University of Wisconsin, Stevens Point; Robert C. [Aquatic Habitat Assessment](#) Mark B. Bain, Nathalie J. Stevenson, 1999

Abstract: Habitat is now the basis of most impact assessments and resource inventories and it is the basis of many species management plans, mitigation planning and environmental regulation. Habitats are relatively stable through time, easily defined in intuitive physical terms and provide a

tangible resource for negotiations and decision making Numerous and varied methods of analyzing and reporting habitat conditions have been developed by federal state provincial and private agencies Habitat assessment approaches vary greatly among regions of the continent The great variability in methods and an unusually wide range of practices have impeded the ability of agencies to share and synthesize information A diversity of methods is desirable in the initial stages of a rapidly developing field but enough time has passed to assess the state of knowledge and identify the best of the currently used methods and techniques This manual is intended to provide fisheries biologists with a limited set of techniques for obtaining aquatic habitat data The manual also describes the range of information collected and used in agency habitat analyses Agencies planning habitat programs should review the synthesis of established and documented methods being used in North America Appendix 1 and the planning recommendations in Chapter 2 Then the remaining chapters should be reviewed to determine what types of habitat data should be included in the agency s program
