Methods In Enzymology Volume 146:

GTPases Regulating Membrane Dynamics W. E. Balch, Channing J. Der, Alan Hall, 2005-12-13 Provides a comprehensive set of articles describing the use and application of state of the art methodologies to identify and characterize these GTPases and their expanding list of regulators and effectors This work also includes methodologies focused on biochemical molecular and advanced imaging techniques *Enzyme Kinetics and Mechanisms, Part E, Energetics of Enzyme Catalysis*, 1999-09-06 This volume supplements Volumes 63 64 87 and 249 of Methods in Enzymology These volumes provide a basic source for the quantitative interpretation of enzyme rate data and the analysis of enzyme catalysis Among the major topics covered are Energetic Coupling in Enzymatic Reactions Intermediates and Complexes in Catalysis Detection and Properties of Low Barrier Hydrogen Bonds Transition State Determination and Inhibitors The critically acclaimed laboratory standard for more than forty years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry Since 1955 each volume has been eagerly awaited frequently consulted and praised by researchers and reviewers alike Now with more than 300 volumes all of them still in print the series contains much material still relevant today truly an essential publication for researchers in all fields of life sciences **MicroRNA Methods** John J. Rossi, 2007-08-30 MicroRNAs miRNA are tiny bits of genetic material that were unknown nearly 10 years ago but now represent an exciting field of study in biology Upon their discovery researchers revealed for the first time a new mechanism by which microRNA can stop the function of messenger RNA mRNA by literally cutting it in half interfering with the normal function of specific messenger RNAs in gene expression This expression of genes that code for essential proteins is essentially what controls whether a cell turns into a liver lung or brain cell for example Understanding what activates this process or stops it is a key to understanding the biological process and builds a foundation for advances in medicine and other fields This volume in Methods in Enzymology presents valuable methods for studying MicroRNA with three sections covering identification of MicroRNAs and their targets MicroRNA expression maturation and functional analysis and MicroRNAs and disease Methods in Methane Metabolism, Part A Amy Rosenzweig, Stephen W. Ragsdale, 2011-05-11 Produced by microbes on a large scale methane is an important alternative fuel as well as a potent greenhouse gas This volume focuses on microbial methane metabolism which is central to the global carbon cycle Both methanotrophy and methanogenesis are covered in detail Topics include isolation and classification of microorganisms metagenomics approaches biochemistry of key metabolic enzymes gene regulation and genetic systems and field measurements The state of the art techniques described here will both guide researchers in specific pursuits and educate the wider scientific community about this exciting and rapidly developing field Topics include isolation and classification of microorganisms metagenomics approaches biochemistry of key metabolic enzymes gene regulation and genetic systems and field measurements The state of the art techniques described here will both guide researchers in specific pursuits and educate the wider scientific community

about this exciting and rapidly developing field **Serpin Structure and Evolution** ,2011-11-07 Serpins are a group of proteins with similar structures that were first identified as a set of proteins able to inhibit proteases This volume in the Methods in Enzymology series comprehensively covers this topic With an international board of authors this volume covers subjects such as Crystallography of serpins and serpin complexes Serpins as hormone transporters and Production of serpins using cell free systems This volume in the Methods in Enzymology series comprehensively covers the topic of serpins With an international board of authors this volume covers subjects such as Crystallography of serpins and serpin complexes Serpins as hormone transporters and Production of serpins using cell free systems **Functional Glycomics** ,2010-10-25 In this 3 volume collection focusing on glycomics readers will appreciate how such discoveries were made and how such methods can be applied for readers own research efforts Each chapter has been designed so that enough scientific background will be given in each chapter for further development of methods by readers themselves Useful for all levels of scientists starting from the last years of colleges graduate students postdoctoral fellows to professors and to all levels of scientists in research institutes including industry **Mitochondrial Function, Part B** ,2009-05-05 In this second of two new volumes covering mitochondria methods developed to assess the number and function of nuclear encoded proteins in the mitochondrion are presented Chapters focus on the regulation of mitochondrial function and mitochondrial diseases with a section emphasizing the mitochondrial defects associated with type 2 diabetes The critically acclaimed laboratory standard for 40 years Methods in Enzymology is one of the most highly respected publications in the field of biochemistry With more than 450 volumes published each volume presents material that is relevant in today s labs truly an essential publication for researchers in all fields of life sciences New methods focusing on the examination of normal and abnormal mitochondrial function are presented in an easy to follow format by the researchers who developed them Along with a companion volume covering topics including mitochondrial electron transport chain complexes and reactive oxygen species provides a comprehensive overview of modern techniques in the study of mitochondrial malfunction Provides a one stop shop for tried and tested essential techniques eliminating the need to wade through untested or unreliable methods **Translation Initiation: Cell Biology, High-throughput and Chemical-based Approaches** ,2007-10-12 For over fifty years the Methods in Enzymology series has been the critically acclaimed laboratory standard and one of the most respected publications in the field of biochemistry The highly relevant material makes it an essential publication for researchers in all fields of life and related sciences This volume the third of three on the topic of Translation Initiation includes articles written by leaders in the field
