Astronomy and Cosmogony Sir James Hopwood Jeans, James Jeans, 1928 **Star Clusters** Charles A. Cardona III, 2010-11-08 I have spent many wonderful nights observing at a variety of places around the world but many of my fondest memories come from those made at the Custer Observatory in Southold on Long Island where I grew up I was only perhaps a dozen years old when I started out and now more than three decades later I have logged millions of miles on the various telescopes there Some of

the best memories are of observing and discussing astronomical topics with the many really terrific people who make up Custer It truly holds a special place in my heart Star clusters were always among my favorite objects to observe and discuss there This book is the result of the exposure to these objects many of which I observed for the first time at Custer The Custer Institute Observatory was founded in the 1920s by local resident Charles W Elmer of Perkin Elmer Corp fame The original crew met at his house in Cedar Beach a few miles down the road from the institute In the 1930s the group built an observatory complete with Mr Elmer s donated 5 Alvan Clark refractor Later the observatory expanded to include a 6 Clark refractor and other even larger instruments

The Brightest Binaries D. Vanbeveren, W. van Rensbergen, C. de Loore, 2001-11-30 The evolution of galaxies is governed mainly by the evolution of massive stars whereas the evolution of a massive star depends primarily on its mass chemical composition and on whether or not the star is a Single object or a binary component To study the evolution of galaxies it is therefore essential to know how stellar masses are distributed at birth how many stars are formed in binaries and what the mass ratio and orbital period distribution of binaries look like Massive stars are intrinsically the brightest stars so that it may be possible to discover their properties in distant groups prOvided that large telescopes can be used for basic stellar observations However until now the observations of massive stars have been reasonably complete only for a small region of our own Galaxy 3 kpc from the Sun One hopes that the conclusions resulting from these observations hold for the whole Galaxy for the whole cosmos With The Brightest Stars of De Jager 1980 in mind the present monograph is an addendum and an update in which we discuss the observations of The Brightest Binaries in the framework of stellar evolution A small or intermediate mass star close to the Sun may look brighter than a massive one far away However within volume limited star samples the massive stars are on average also the brightest ones In the present monograph similarly as in the work of De Jager bright means massive The book consists of four main chapters
