## **Remaking The City Social Science Perspectives On Urban Design:**

**Remaking the City** John S. Pipkin, 1984-06-30 This book pulls together a variety of perspectives on urban form and urban design. It contains invited contributions by well known architects, economists, geographers, sociologists, and planners fostering a much needed dialogue between practitioners and theorists of urban planning. The contributions provide inclusive reviews of the state of the art in various fields as well as develop original and sometimes controversial new ideas. As a whole, they cut across some of the key conceptual lines of demarcation in urban research. The distinct concerns of architects, planners, social scientists, and practitioners are probed. Cognitive and semiotic perspectives on urban form are contrasted and the merits of individualistic versus structural explanation are discussed. **Building Cities that Work** Edmund P. Fowler, 1993 Since 1945 North Americans have spent hundreds of billions of dollars on urban development, literally transforming the landscape of the continent. This development has been disastrous, Edmund Fowler maintains, because it is inordinately expensive, destructive of the environment, and disruptive of healthy social life and authentic politics. Revealing the connections between our basic cultural beliefs and why we build the way we do, he stresses that to build cities that work we must become aware of how our personal choices contribute to the form of the built environment. Professionals and Urban Form Judith R. Blau, Mark E. La Gory, John S. Pipkin, 1984-06-30 *Professionals and Urban Form* departs from the usual way of studying the city to examine the chief professions responsible for designing urban places: planning and architecture. Not often treated together, they are here combined to highlight common problems and lines of convergence between the two. The architects, planners, and social scientists who contributed to this book concern themselves with the interconnection between knowledge and practice in planning and architecture, paying particular attention to the issues of whether design knowledge and theory can or should be distinct from social science knowledge and the effects of professionalization and institutionalization on the structuring of inquiry and theory. The main sections of the book deal with the history of the design professions, epistemological foundations, professions and practice, and controversies in practice. Many issues of contemporary interest to planners are dealt with, including the debates over normative advocacy and communicative planning. Marxist perspectives, supply and demand in the job market for architects, and the overarching epistemological question of the relationship between social science research and design practice. *The Public Realm* Lyn H. Lofland, 2017-07-12 This book is about the public realm, defined as a particular kind of social territory that is found almost exclusively in large settlements. This particular form of social psychological space comes into being whenever a piece of actual physical space is dominated by relationships between and among persons who are strangers to one another, as often occurs in urban bars, buses, plazas, parks, coffee houses, streets, and so forth. More specifically, the book is about the social life that occurs in such social psychological spaces, the normative patterns and principles that shape it, the relationships that characterize it, the aesthetic and interactional pleasures that enliven it, and the forces anti-urbanism, privatism, post-war planning, and architecture that

threaten it The data upon which the book's analysis is based are diverse direct observation interviews contemporary photographs historic etchings prints and photographs and historical maps histories of specific urban public spaces or spatial types and the relevant scholarly literature from sociology environmental psychology geography history anthropology and architecture and urban planning and design Its central argument is that while the existing body of accomplished work in the social sciences can be reinterpreted to make it relevant to an understanding of the public realm this quintessential feature of city life deserves much more u it deserves to be the object of direct scholarly interest in its own right Choice noted that The author's writing style is unusually accessible and the often fascinating narrative is generously supported by well chosen photos

**Cities, Politics, and Policy** John P. Pelissero, 2002-10-01 Just because Milwaukee isn't Manhattan doesn't mean that those urban centers face completely unique challenges Through effective comparative analysis of key issues in urban studies how city managers share power with mayors how spending policies affect economic development and how school politics impact education policy students can clearly see how scholars discern patterns and formulate conclusions to offer theoretical and practical insights from which all cities can benefit Pelissero brings together an impressive team of contributors to explore variation among cities through case studies and cross sectional analyses Each author synthesizes the field's seminal literature while explaining how urban leaders and their constituents grapple with everything from city council politics to conflict and cooperation among minority groups Authors identify both key trends and gaps in the scholarship and help set the research agenda for the years to come Lively case material will hook your students while the accessible presentation of empirical evidence make this reader the comprehensive and sophisticated text you demand

*Black Lives and Spatial Matters* Jodi Rios, 2020-08-15 Black Lives and Spatial Matters is a call to reconsider the epistemic violence that is committed when scholars policymakers and the general public continue to frame Black precarity as just another racial cultural or ethnic conflict that can be solved solely through legal political or economic means Jodi Rios argues that the historical and material production of blackness as risk is foundational to the historical and material construction of our society and certainly foundational to the construction and experience of metropolitan space She also considers how an ethics of lived blackness living fully and visibly in the face of forces intended to dehumanize and erase can create a powerful counter point to blackness as risk Using a transdisciplinary methodology Black Lives and Spatial Matters studies cultural institutional and spatial politics of race in North St Louis County Missouri as a set of practices that are intimately connected to each other and to global histories of race and race making As such the book adds important insight into the racialization of metropolitan space and people in the United States The arguments presented in this book draw from fifteen years of engaged research in North St Louis County and rely on multiple disciplinary perspectives and local knowledge in order to study relationships between interconnected practices and phenomena

*Housing Needs and Policy Approaches* Willem Van Vliet, Elizabeth D. Huttman, Sylvia Fleis Fava, 1985 Drawing upon research from six continents Housing Needs and Policy

Approaches analyzes the social problems involved with providing housing in the industrialized nations and in the Third World The book focuses on four areas of concern current trends in housing in specific Western countries the role of Western governments in creating this housing housing provisions in less developed nations and the relationship of societal structure and housing particularly with respect to the decentralization of population occurring in many regions **Architectural**

**Tourism** Jan Specht,2014-05-19 Since the early times of travelling architecture does constitute an important force of attraction and a vital element in marketing Until today destinations try to increase their market positions by means of the development and restoration of the built environment However architecture is characterised by an enduring presence with impacts on visitors and residents alike Hence on a sustainable basis it needs to chime with place and situation Where modesty might be suitable for one destination spectacular architecture could be a transformation catalyst or unique selling proposition for another Destination developers have to be aware of the local requirements as well as the reciprocal relationship between the modern practice of tourism and the built environment To address the complexity of architectural tourism throughout the book this topic is subject of a controversial discussion and approached with a contextual and interdisciplinary view Unhealthy Places Kevin Fitzpatrick,Mark LaGory,2002-09-11 Unhealthy Places focuses on issues of health in today s cities By arguing that place matters in relation to the population s health Kevin Fitzpatrick and Mark

LaGory make a convincing argument about the general unhealthiness of urban environments and thus of the urban dweller The authors offer a place oriented approach to health and cover such topics as the ecology of everyday urban life the sociology of health needs and risks of the socially disadvantaged needs and risks of children and the elderly in cities and strategies for better health services in urban environments *Street Signs* David P. Leong,2012-07-01 Street Signs is an engaging missiological inquiry into the cultural and theological meaning of the city Through the lens of Seattle s Rainier Valley one of the most ethnically and socioeconomically diverse communities in the US this work constructs an urban missional and contextual theology that is shaped by the local realities of urban neighborhoods but relevant to cities everywhere Focused on the themes of incarnation confrontation and imagination Street Signs explores the contours of missional theology in urban contexts marked by physical density social diversity and economic disparity In addition to examining contextualization and cultural theory Street Signs also utilizes creative research methods like urban exegesis cultural semiotics and theology of the built environment For the urban ministry practitioner or the theologian in the city this work aims to engage thoughtful Christians with missiological and theological reflections on place neighbor and community

**Unhealthy Cities** Kevin Fitzpatrick,Mark LaGory,2013-06-17 The purpose of this book is to show the important role that space and place plays in the health of urban residents particularly those living in high poverty ghettos The book brings together research and writing from a variety of disciplines to demonstrate the health costs of being poor in America s cities Both authors are committed to raising awareness of structural factors that promote poverty and injustice in a society that

proclaims its commitment to equality of opportunity Our health is often dramatically affected by where we live some parts of the city seem to be designed to make people sick The book is intended for students and professionals in urban sociology medical sociology public health and community planning

**Public Space in Informal Settlements** Jaime Hernández-García, 2013-12-05 Public Space in Informal Settlements The Barrios of Bogotá contributes to the debate on informal settlements by viewing them as an opportunity to understand different ways of seeing and thinking about the city Public spaces in informal settlements like the housing stock are to a large extent the product of local self help and self managed processes however the equivalent level of understanding has not been achieved partly because such settlements are often seen as spare spaces with little value Public spaces in informal settlements are public in terms of ownership and accessibility but are communal in terms of use and attachment They play an important role in the physical and social dynamics of the barrios and have done since their inception however the improvement and consolidation of such spaces may not be realised for many years The book will be of primary importance to architects urban planners and researchers who are interested in the city in general and in informal settlements in particular The book will also be of interest to those in the humanities and social sciences who are concerned with politics and postcolonial studies and to academics working in people environment studies and in the relationship between people and place in terms of place self building place attachment and place identity However the volume will be of most interest for Latin Americanists who do not read Spanish or Portuguese and would like to know more about the region the problems and the views from the perspective of an insider with extended knowledge of the field

*The Politics of Urban Sustainability Transitions* Jens Stissing Jensen, Matthew Cashmore, Philipp Späth, 2018-10-17 Cities the world over are increasingly recognised to be both a principal source of the environmental and social sustainability challenges facing contemporary society and a critical site for addressing these challenges Socio technical systems are at the heart of these challenges as they configure central aspects of urban life from mobility and energy infrastructures to leisure activities and patterns of mobility This observation has led to substantial interest in how societies might initiate and actively steer radical transitions in these systems in the pursuit of sustainable urban futures This book contributes to emerging debates on the politics of urban transitions by examining the intimate interlinkages between knowledge power and governance Drawing upon real world examples of urban governance the authors explore the strategies struggles and controversies involved in configuring knowledge and how knowledge constructions influence governance by rendering some concerns and issues visible and valuable while obscuring others The book draws

attention to how novel ways of conceptualising knowing and observing socio technical systems may be harnessed productively in redefining the power relationships underpinning unsustainable practices Understanding these dynamics can ultimately inform and enable new approaches to support much needed urban transitions This book provides a compelling examination of urban knowledge politics for the twenty first century that will be of great value to academics policy makers and practitioners working in the social sciences urban studies geography urban governance or sustainability transitions
