Remarkable Reptiles Isabel Thomas,2013 Life sciences Level M P 4 of cover **The Student's Lyell** Sir Charles Lyell,1911 **Extinct Monsters : A Popular Account of Some of the Larger Forms of Ancient Animal Life** H. N. Hutchinson, Extinct Monsters A Popular Account of Some of the Larger Forms of Ancient Animal Life Natural history is deservedly a popular subject The manifestations of life in all its varied forms is a theme that has never failed to attract all who are not destitute of intelligence From the days of the primitive cave dwellers of Europe who lived with mammoths and other animals now lost to the world of the ancient Egyptians who drew and painted on the walls of their magnificent tombs the creatures inhabiting the delta of the Nile of the Greeks looking out on the world with their bright and child like curiosity down to our own times this old yet ever new theme has never failed Never before was there such a profusion of books describing the various forms of life inhabiting the different countries of the globe or the rivers lakes and seas that diversify its scenery Popular writers have done good service in making the way plain for those who wish to acquaint themselves with the structures habits and histories of living animals while for students a still greater supply of excellent manuals and text books has been and still continues to be forthcoming But in our admiration for the present we forget the great past How seldom do we think of that innumerable x host of creatures that once trod this earth How little in comparison has been done for them Our natural history books deal only with those that are alive now Few popular writers have attempted to depict as on a canvas the great earth drama that has from age to age been enacted on the terrestrial stage of which we behold the latest but probably not the closing scenes Another object which the writer has kept in view is to connect the past with the present It cannot be too strongly urged that the best commentary on the dead past is the living present It is unfortunate that there is still too great a tendency to separate as by a great gulf the dead from the living the past from the present forms of life The result of this is seen in our museums Fossils have too often been left to the attention of geologists not always well acquainted with the structures of living animals The more frequent introduction of fossil specimens side by side with modern forms of life would not only be a gain to the progress and spread of geological science but would be a great help to students of anatomy and natural history The tree of life is but a mutilated thing and half its interest is gone when the dead branches are lopped off It is perhaps justifiable to give to the term monster a somewhat extended meaning The writer has therefore included in his menagerie of extinct animals one or two creatures which though not of any great size are nevertheless remarkable in various ways such for instance as the winged reptiles and anomalous birds with teeth of later times and others Compared with living forms these creatures appear to us as monstrosities and may well find a place in our collection *The Geological Magazine Or Monthly Journal of Geology* ,1878 *Geological Magazine* Henry Woodward,1878 **The British**
