Clinical Environmental Health and Toxic Exposures John Burke Sullivan, Gary R. Krieger, 2001 Now in its revised and updated Second Edition this volume is the most comprehensive and authoritative text in the rapidly evolving field of environmental toxicology The book provides the objective information that health professionals need to prevent environmental health problems plan for emergencies and evaluate toxic exposures in patients Coverage includes safety regulatory and legal issues clinical toxicology of specific organ systems emergency medical response to hazardous materials releases and hazards of specific industries and locations Nearly half of the book examines all known toxins and environmental health hazards A Brandon Hill recommended title Toxicology of the Kidney Jerry B. Hook, Robin S. Goldstein, 1993-06-30 This second edition provides a synthesis of recent research on the mechanisms of chemically induced kidney injury The text includes a review of current concepts of clinical nephrotoxicity and renal failure and mechanisms of specific classes of nephrotoxic drugs and environmental chemicals *Nephrotoxicity* Peter Bach, 2013-06-29 There has been a growing awareness that nephrotoxicity represents a key factor in human nephropathies where irrespective of the causative agent only a few clinical end effects are diagnosed Thus nephropathies are generally classified as acute or chronic renal failure malignancies or immunological changes The weaknesses in diagnosing nephropathies arises because of the effective role the kidney plays in maintaining homeostasis despite the fact that it has been extensively damaged The frequencies of some type of chemically induced acute renal failure is well documented but the causes of chronic renal failure malignancy and other nephropathies are far more difficult to associate with a chemical aetiology Many of the new therapeutic agents have important beneficial effects but they are found to have marked nephrotoxic effects Thus there is a growing urgency to increase the stringency of chemical safety evaluation for their potential nephrotoxic effects This is strongly countered by the increased financial pressure to identify potentially nephrotoxic chemicals earlier in their development and humanitarian considerations to more closely relate animal test to the clinical situation Part of the challenge may be achieved by the increasing use of in vitro techniques *Environmental Health Perspectives*, 1993 **TOX-TIPS, Toxicology Testing in Progress**, 1987 Includes notices of research projects submitted to the Smithsonian Science Information Exchange concerning toxicological testing *Toxicological Profile for Gasoline*, 1995 **NTP Toxicity Study Reports**, 1991 **The Identification and Control of Environmental and Occupational Diseases** Myron A. Mehlman, Arthur C. Upton, 1994 *Jet Fuel Toxicology* Mark L. Witten, Errol Zeiger, Glenn David Ritchie, 2010-07-30 Currently serving as a resource for the National Center for Toxicological Research in their work with the Gulf Coast oil spill this book presents current research conducted primarily by the airforce on the toxic effects of JP 8 jet fuel on the pulmonary immune dermal and nervous systems In all the book considers 13 toxicology studies Trace Substances in Environmental Health, XXI Delbert D.
