Renal Cell Carcinoma:

Renal Cell Carcinoma Ronald M. Bukowski, Andrew Novick, 2000-04-10 Renal cell carcinoma represents a heterogeneous group of tumors the most common of which is clear cell adenocarcinoma The annual incidence of this tumor appears to be rising and approximately 12 000 individuals die from this cancer annually in the United States One third of patients who present have metastatic disease at the time of diagnosis and another 40% who undergo nephrectomy will ultimately develop this complication Over the past 10 years a significant amount of new information concerning the epidemiology molecular and immunologic characteristics and therapy for patients with these tumors has appeared The recognition that inherited forms of renal cancer exist and that chromosomal abnormalities can be identified in these tumors suggested a genetic basis for renal cell carcinoma The familial cancer syndrome Von Hippel Lindau disease provided the setting in which the genetic abnormalities associated with the development of renal cancer were first described Abnormalities of the VHL gene have also been detected in sporadic clear cell carcinoma and it has now been recognized that approximately 80 % of these tumors will demonstrate characteristic alterations Currently the functions of the VHL protein are being investigated and the biology of clear cell carcinoma of the kidney is under study Additionally papillary carcinomas of the kidney appear to express different molecular defects and these are now being unraveled Kidney Cancer Primo N. Lara (Jr.), Eric Jonasch, 2012 Kidney Cancer Principles and Practice is an interdisciplinary textbook that encompasses all clinically relevant aspects of the disease and is designed to be as user friendly as possible in order to meet the needs of the busy practitioner To this end the informative text is complemented by helpful boxed sections that present essential take home points and patient oriented cases demonstrating the clinical application of elements discussed in the chapter in question Original high quality images some in color are included whenever necessary to simplify particularly complex material The authors are an international group of acknowledged experts in kidney cancer epidemiology molecular biology pathology diagnosis clinical features staging prognostic and predictive factors surgery systemic therapy and emerging investigational approaches among others This clinically oriented volume will be of great interest to clinicians researchers residents and fellows as well as to students and knowledgeable lay people *Renal Cell Carcinoma* Steven C. Campbell, Brian I. Rini, 2012-09-26 Renal Cell Carcinoma Clinical Management provides a comprehensive state of the art review of this field and will serve as a valuable resource for clinicians surgeons and researchers with an interest in kidney cancer The volume reviews new data about risk factors for the disease profiles the new staging system for renal cell carcinoma RCC highlights our current understanding of familial syndromes of RCC and their molecular genetics and provides new perspectives about imaging of renal tumors For localized disease a greater appreciation of nephron sparing approaches and the importance of preservation of renal function is discussed in detail Advances in surgical techniques are highlighted For metastatic disease the molecular biology of kidney cancer is reviewed in a concise and understandable manner including the data that has

fostered novel targeted approaches that have revolutionized management The several landmark phase III targeted therapy trials published in the last few years are placed in context with respect to current management Integration of surgery and systemic therapy through cytoreductive and consolidative approaches has yielded provocative data that promises to further advance the field and major advances in this domain are also be discussed Renal Cancer John A. Renal Cell Carcinoma José I. López, 2020-04-22 Renal cancer is a health problem of major concern worldwide Although tyrosine kinase inhibitors and immune check point blockade treatments alone or in combination are giving promising results failures are quite frequent due to intratumor heterogeneity and to the acquisition of drug resistance The spectrum of renal cell carcinoma subtypes is wide Up to 70 80% of renal tumors are clear cell renal cell carcinomas a clinically aggressive tumor subtype linked to VHL gene inactivation Next in frequency the papillary renal cell carcinoma category encompasses an intricate puzzle of classic and newly described entities with poorly defined limits some of them pending definite clarification Likewise the chromophobe oncocytoma duality the so called hybrid tumors and oncocytic neoplasms remain to be well profiled Finally a growing list of very uncommon renal tumors linked to specific molecular signatures fulfill the current portrait of renal cell neoplasia This Special Issue of *Cancers* regards RCC from very different perspectives from the intimate basic mechanisms governing this disease to the clinical practice principles of their diagnoses and treatments The interested reader will have the opportunity to contact with some of the most recent findings and will be updated with excellent reviews

Contemporary Research on Renal Cell Carcinoma Gerd Staehler, Sigmund Pomer, 2012-12-06 The management of advanced renal cell carcinoma is still problematic Surgery although the therapy of choice for locally advanced renal tumors is still controversial as the treatment for metastases The role of surgery in the management of patients with pulmonary bony and liver metastasis is one of the subject matters discussed in this book Our results with series of patients undergoing resection of metastases from the lung bone and liver show that surgery may be appropriate in selected patients with a good performance status although most of them certainly cannot be cured by this procedure alone i e in the absence of effective adjuvant therapies As recent developments show new strategies for immunotherapy of renal cell carcinoma represent a modest advance over traditional approaches in the treatment of this cancer such as chemo and radiotherapy Clinical trials employing recombinant interferon α and interleukin 2 produced response rates in up to 30% of patients treated as evidenced by the European Immunotherapy Trials Program The adverse reactions and the lack of efficacy in the majority of patients

warrants the search for new immunotherapeutic approaches **Kidney Cancer** Primo N. Lara, Eric Jonasch, 2015-06-10
