Tactile Display for Virtual 3D Shape Rendering Alessandro Mansutti,Mario Covarrubias Rodriguez,Monica Bordegoni,Umberto Cugini,2017-02-15 This book describes a novel system for the simultaneous visual and tactile rendering of product shapes which allows designers to simultaneously touch and see new product shapes during the conceptual phase of product development This system offers important advantages including potential cost and time savings compared with the

standard product design process in which digital 3D models and physical prototypes are often repeatedly modified until an optimal design is achieved. The system consists of a tactile display that is able to represent within a real environment the shape of a product. Designers can explore the rendered surface by touching curves lying on the product shape, selecting those curves that can be considered style features and evaluating their aesthetic quality. In order to physically represent these selected curves, a flexible surface is modeled by means of servo-actuated modules controlling a physical deforming strip. The tactile display is designed so as to be portable, low cost, modular, and high performing in terms of the types of shape that it can represent.

United States of America V. De Stefano, 1972. *Re-Reading Leonardo*. Claire Farago, 2017-07-05. For nearly three centuries, Leonardo da Vinci's work was known primarily through the abridged version of his *Treatise on Painting*, first published in Paris in 1651 and soon translated into all the major European languages. Here for the first time is a study that examines the historical reception of this vastly influential text. This collection charts the varied interpretations of Leonardo's ideas in French, Italian, Spanish, English, German, Dutch, Flemish, Greek, and Polish-speaking environments where the *Trattato* was an important resource for the academic instruction of artists, one of the key sources drawn upon by art theorists and widely read by a diverse network of artists, architects, biographers, natural philosophers, translators, astronomers, publishers, engineers, theologians, aristocrats, lawyers, politicians, entrepreneurs, and collectors. The cross-cultural approach employed here demonstrates that Leonardo's *Treatise on Painting* is an ideal case study through which to chart the institutionalization of art in Europe and beyond for 400 years. The volume includes original essays by scholars studying a wide variety of national and institutional settings. The coherence of the volume is established by the shared subject matter and interpretative aim to understand how Leonardo's ideas were used. With its focus on the active reception of an important text overlooked in studies of the artist's solitary genius, the collection takes Leonardo studies to a new level of historical inquiry. Leonardo da Vinci's most significant contribution to Western art was his interpretation of painting as a science grounded in geometry and direct observation of nature. One of the most important questions to emerge from this study is what enabled the same text to produce so many different styles of painting.

Stefano Cerio. Stefano Chiodi, 2022-01-01. Der Boden ist schneebedeckt, der Horizont eine dunkle Gebirgslinie, tiefhängende milchige Wolken verdecken den Himmel. Im Vordergrund erhebt sich eine seltsam unförmige Masse in leuchtenden Farben: rot, blau und gelb. In weniger als einer Minute materialisiert sich eine aufblasbare Hufburg wie man sie oft auf Kinderspielflächen, Jahrmärkten und Dorffesten sieht. Unbeholfen ragen diese Luftschlösser in ihrer einer Fata Morgana ähnlichen Form von Doppeltürmen, Drachentürmen, Fußballfeldern verloren aus bizarren Szenerien heraus. Die Stefano Cerio mit *Aquila* erschaffen hat. Aufgenommen zu unterschiedlichen Jahreszeiten vor der eindrucksvollen Kulisse der Abruzzen, nicht weit entfernt von L'Aquila, ist eine Serie von großer Melancholie entstanden.

Designing Technology, Work, Organizations and Vice Versa Enrico Attila Bruni, Laura Lucia Parolin, Cornelius Schubert, 2015-09-01 The concept of design has been defined in a multitude of ways and used in a variety of academic fields ranging from the classics of organizational and system design to studies on corporate culture aesthetics and consumption However in mainstream organization and management studies the concept of design has been

black boxed and easily implied as an updated and more fashionable version of the traditional idea of structuring organizational processes At the same time working and organizing seem to be embedded nowadays in increasingly complex and situated technologies and practices If the spreading of information and communication technologies ICTs has changed workplaces and even the very meaning of workplace as an area marked by the physical presence of different human actors working and organizing mobilizes the joint action of humans technologies and knowledges The aim of the book is thus to discuss the relations among technologies work and organisations from multiple theoretical perspectives and to engage with questions about design as well as the sociomaterial foundations of working and organising The book focuses on the close study of practices and processes that inextricably link work and organisation to the use of artefacts and technological systems and vice versa exploring by means of different cases of organizational and design research articulations and disarticulations of daily work and design the doing of objects and technologies in everyday organizational life the reconstruction of organizational processes through technological and design practices the relation between learning innovations and technologies in organizational settings The book is addressed to graduate students PhDs scholars and researchers interested in the fields of Organization Studies Science and Technology Studies Sociology and Design as well as to professionals and practitioners interested in new methodological approaches towards the relations between technology work and organization
