regulation lipid metabolism by a lipid carrying protein the GABA and taurine enzymes in mammalian brain One paper examines the role of vitamin D in the metabolism of cells as well as in the whole animal Upon absorption in the body the vitamin undergoes various metabolic transformations before interacting with specific receptors and then inducing the genome in the target tissues to generate biological and hormonal responses Another paper notes the possibility of a genetic defect in cancer cells that results in the abnormal accumulation of sterol carrier protein SCP and cholesterol in vivo and also in the inability to maintain levels of SCP or cholesterol in vitro One paper shows that tartrate or other organic acids secreted into the medium by the penicillia keeps the pH in an optimal range for acid protease degradation of proteins and glycoproteins This mechanism helps the fungus to survive in a nutrient environment which is unbalanced with respect to an optimum C N ratio and at a pH unfavorable to many bacteria and other life forms Another paper proposes a model for the modulation of ATP synthetase activities and medium exchange reactions by energy input substrate concentration or others that affect the microenvironment of the enzyme under certain conditions The compendium will prove beneficial to molecular biologists general biologists microbiologists and biochemists
