Methods Of Hormone Radioimmunoassay:

Methods of Hormone Radioimmunoassay Bernard Jaffe, 2012-12-02 **Methods of Hormone Radioimmunoassay** Second Edition is a compilation of radioimmunoassay techniques for the quantification of hormones. Various kinds of hormones are considered, namely intracellular messengers, hypothalamic and pineal hormones, pituitary hormones, thyroid and parathyroid hormones, renal hormones, hormones of the gastrointestinal tract, pancreatic hormones, steroid hormones, uterine and placental hormones, vasoactive peptide hormones, and growth factors. The corresponding method of radioimmunoassay for each hormone is described. This book is comprised of 49 chapters and begins with a discussion on the radioimmunoassay of cyclic adenosine 3',5'-monophosphate (cAMP) and cyclic guanosine 3',5'-monophosphate (cGMP) together with problems related to measuring both compounds. The reader is then introduced to prostaglandins and prostaglandin metabolites, thyrotropin-releasing hormone, and gonadotropin-releasing hormone. Pituitary gonadotropins, prolactin, and thyrotropin are also discussed. The remaining chapters deal with hormones of the gastrointestinal tract, pancreatic hormones, steroid hormones, and growth factors. This monograph is intended for both clinicians and investigators interested in methods of hormone radioimmunoassay.

Methods of Hormone Radioimmunoassay Bernard M. Jaffe, 1974 **Methods of Hormone Radioimmunoassay** Bernard M. Jaffe, 1974 Methods of Hormone Radioimmunoassay, Edited by Bernard M. Jaffe [And] Harold R. Behrman Bernard M. Jaffe, Harold R. Behrman, 1974 Principles and Methods of Toxicology, Fifth Edition A. Wallace Hayes, 2007-09-25 Founded on the paradox that all things are poisons and the difference between poison and remedy is quantity, the determination of safe dosage forms the base and focus of modern toxicology. In order to make a sound determination, there must be a working knowledge of the biologic mechanisms involved and of the methods employed to define these mechanisms. While the vastness of the field and the rapid accumulation of data may preclude the possibility of absorbing and retaining more than a fraction of the available information, a solid understanding of the underlying principles is essential. Extensively revised and updated with four new chapters and an expanded glossary, this fifth edition of the classic text *Principles and Methods of Toxicology* provides comprehensive coverage in a manageable and accessible format. New topics include toxicokinetics, plant and animal poisons, information resources, and non-animal testing alternatives. Emphasizing the cornerstones of toxicology—people, dose, matters, and things change—the book begins with a review of the history of toxicology and is followed by an explanation of basic toxicological principles: agents that cause toxicity, target organ toxicity, and toxicological testing methods, including many of the test protocols required to meet regulatory needs worldwide. The book examines each method or procedure from the standpoint of technique and interpretation of data and discusses problems and pitfalls that may be associated with each. The addition of several new authors allows for a broader and more diverse treatment of the ever-changing and expanding field of toxicology. Maintaining the high quality information and organizational framework that made the previous editions so successful, *Principles and Methods of Toxicology, Fifth Edition*

continues to be a valuable resource for the advanced practitioner as well as the new disciple of toxicology
