Methods in Chemosensory Research Sidney A. Simon, Miguel A. L. Nicolelis, 2001-09-26 Written by world experts in the field of neuronal chemoreception *Methods in Chemosensory Research* describes new molecular electrophysiological genetic behavioral psychophysical and imaging techniques that have recently been adapted to investigate the basic neuronal mechanisms underlying chemoreception taste olfaction and chemical induced irritation This unique book includes a wide variety of new and innovative imaging methods electrophysiological methods methods to investigate development and various aspects of behavioral testing Covering the entire spectrum of chemoreception each section not only describes what information can be obtained by using each method but also shows how to apply each method to obtain reliable results The book presents a comprehensive view of how the brain uses information about chemical stimuli that interact with receptors in the nose and tongue *Methods in Chemosensory Research* gives you the new tools to learn how chemicals affect activity from the genetic to the behavioral levels

Experimental Cell Biology of Taste and Olfaction Andrew I. Spielman, Joseph G. Brand, 1995-07-12 *Experimental Cell Biology of Taste and Olfaction* examines and adapts methods from a variety of established fields such as neurophysiology receptor biochemistry and cellular imaging to provide comprehensive coverage of current techniques and protocols in chemosensory cell biology Written for both newcomers and established scientists this volume offers numerous tips for problem solving and suggests ways to avoid the most common and costly mistakes made by researchers This book covers general aspects such as tissue collection and preparation as well as specific up to date methods used in taste and olfactory morphology immunology biochemistry biophysics electrophysiology and molecular biology The explosion of knowledge and the increased interest in these areas make this book an important reference work for all scientists students and teachers in this and related fields

Statistical Techniques for Neuroscientists Young K. Truong, Mechelle M. Lewis, 2016-10-04 *Statistical Techniques for Neuroscientists* introduces new and useful methods for data analysis involving simultaneous recording of neuron or large cluster brain region neuron activity The statistical estimation and tests of hypotheses are based on the likelihood principle derived from stationary point processes and time series Algorithms and software development are given in each chapter to reproduce the computer simulated results described therein The book examines current statistical methods for solving emerging problems in neuroscience These methods have been applied to data involving multichannel neural spike train spike sorting blind source separation functional and effective neural connectivity spatiotemporal modeling and multimodal neuroimaging techniques The author provides an overview of various methods being applied to specific research areas of neuroscience emphasizing statistical principles and their software The book includes examples and experimental data so that readers can understand the principles and master the methods The first part of the book deals with the traditional multivariate time series analysis applied to the context of multichannel spike trains and fMRI using respectively the probability structures or likelihood associated with time to fire and

discrete Fourier transforms DFT of point processes The second part introduces a relatively new form of statistical spatiotemporal modeling for fMRI and EEG data analysis In addition to neural scientists and statisticians anyone wishing to employ intense computing methods to extract important features and information directly from data rather than relying heavily on models built on leading cases such as linear regression or Gaussian processes will find this book extremely helpful
