Non-monotonic Reasoning and Partial Semantics Wiebe Hoek, Wiebe van der Hoek, 1992 Stressing partial and multiple valued approaches to non monotonic logic this volume demonstrates how major problems can be overcome It proposes a simple modal framework in which non monotonic reasoning is captured in a dynamic setting **Explanatory**

Nonmonotonic Reasoning Alexander Bochman, 2005 Many approaches in the field of nonmonotonic and commonsense reasoning are actually different representations of the same basic ideas and constructions This book gives a logical formalization of the original explanatory approach to nonmonotonic reasoning It uses the basic formalism of biconsequence relations as well as derived systems of default autoepistemic and causal inference to cover in a single framework such diverse systems as default logic autoepistemic and modal nonmonotonic logics input output and causal logics argumentation theory and semantics of general logic programs with negation as failure This approach provides a clear separation between logical monotonic and nonmonotonic aspects of nonmonotonic reasoning The separation allows in particular to single out the logics underlying modern logic programming and restore thereby the connection between logic programming and logic

Nonmonotonic Reasoning Grigoris Antoniou, Mary-Anne Williams, 1997 Nonmonotonic reasoning provides formal methods that enable intelligent systems to operate adequately when faced with incomplete or changing information. In particular, it provides rigorous mechanisms for taking back conclusions that in the presence of new information turn out to be wrong and for deriving new alternative conclusions instead. Nonmonotonic reasoning methods provide rigor similar to that of classical reasoning; they form a base for validation and verification and therefore increase confidence in intelligent systems that work with incomplete and changing information. Following a brief introduction to the concepts of predicate logic that are needed in the subsequent chapters, this book presents an in-depth treatment of default logic. Other subjects covered include the major approaches of autoepistemic logic and circumscription, belief revision, and its relationship to nonmonotonic inference, and briefly the stable and well-founded semantics of logic programs.

Nonmonotonic Reasoning Dritan Berzati, 2007 The capability to reason in a world full of uncertainties, vagueness, and ignorance is what distinguishes humans. This ability to argument in a partially known world is the informal definition of common sense reasoning. The question how common sense reasoning is performed occupied humanity since we can think of. Last century, this issue reached an immense importance. Especially during the last three decades, the study of common sense reasoning became one of the major research topics in Artificial Intelligence (AI). Several formalisms to capture the mechanism of common sense reasoning have been proposed so far. This book concentrates on presenting the most important formalisms for common sense reasoning and showing that one of the discussed formalisms serves perfectly to capture the mechanism of common sense reasoning since this formalism subsumes all other in this book introduced formalisms dealing with common sense reasoning.

Logics in AI Jan van Eijck, 1991-02-26 The European Workshop on Logics in Artificial Intelligence was held at the Centre for Mathematics and Computer Science in Amsterdam, September 10-14, 1990. This volume includes the 29 papers selected and presented at the workshop together with 7 invited papers. The main themes are Logic programming and automated theorem proving, Computational semantics for natural language, Applications of non-classical logics, Partial and dynamic logics.
