Redefining Student Learning Roots Of Educational Change:

Redefining Student Learning Hermine H. Marshall, 1992 Presenting an alternative view of where educational reform must begin the contributors contend that we must begin with rethinking the nature of learning and with newer knowledge about how students learn Only then can the conditions that support the type of learning that will create productive citizens for the 21st century be considered The book begins with the need to redefine learning by increasing awareness of the relationship between how students learn and efforts to improve schools The next seven chapters present examples of classroom research to provide a glimpse of what happens when teachers implement newer views of learning based on how students actively construct knowledge in meaningful and multi connected networks These examples serve to provide clues about what learning may look like in classrooms with these goals and to raise questions about factors that support and or constrain teachers in providing opportunities for students to extend understanding to solve complex problems

Perceiving, Behaving, Becoming H. Jerome Freiberg, 1999 In 1962 ASCD's *Perceiving Behaving Becoming A New Focus for Education* provided bold insights on the psychological foundation of education Some of the most compelling questions in education today were first asked in this groundbreaking work which included chapters by preeminent scholars Arthur Combs Earl Kelley Abraham Maslow and Carl Rogers Although we cannot predict what current information future generations will need to know the book's Introduction states creating schools that encourage the development of persons with adequate fully functioning personalities is the best way to contribute some degree of stability to an uncertain future Decades later in preparing *Perceiving Behaving Becoming Lessons Learned* editor H Jerome Freiberg invited distinguished scholars in the field of affective humanistic education and psychology to review these four chapters from the 1962 book to provide a context for lessons learned for future generations of educators Each author in *Lessons Learned* works with teachers administrators and schools and offers a distinct perspective on the human side of teaching and learning Their analyses raise significant issues such as whether an emphasis on academic standards ignores the education of the whole student and what schools that are committed to an environment of trust and respect look like *Lessons Learned* promises to further the cause of education that focuses on the person By understanding the evolution of our educational past says Freiberg perhaps we can shape a future that will better meet the needs of generations that come after us

Engaging Environmental Education, 2010-01-01 As more attention is devoted to the increasing and complex socio ecological issues facing the planet new insights and new ways of thinking are being sought about the learning and agency of children and adults in relation to these environmental concerns The contributors to this book address the critically important dual challenge of making environmental education engaging while engaging individuals institutions and communities Rather than treating students and citizens as passive recipients of other people's knowledge the book highlights the importance of engaging learners as active agents in thinking about and constructing a more sustainable and equitable quality of life The

case studies emphasize socio cultural approaches to environmental learning within and outside formal education in a diverse range of international contexts including Canada Denmark Korea the Netherlands South Africa Sweden the United Kingdom and the United States The authors not only illuminate the challenges and complexity of engaging youth and adults in meaningful learning as well as informed action on complex environmental issues but also document and offer important insights into promising ways in which these challenges might be addressed In addition to the many stimulating ideas and strategies for building the learning capacities of individuals and organizations for creating ecologically sustainable communities and societies further important questions are raised that educators policymakers and researchers might consider

Writing Portfolios in the Classroom Robert Calfee, Pamela Perfumo, 2012-10-12 This volume presents chapters by researchers practitioners and policymakers who study the impact of classroom portfolios in the assessment of writing achievement by elementary and middle grade students The focus throughout the volume is on the tension between classroom assessment and externally mandated testing It presents the efforts of researchers practitioners and policymakers to understand the impact of classroom portfolios for the assessment of writing achievement by elementary and middle grade students Under the auspices of the Center for the Study of Writing the editors conducted a national survey of exemplary portfolio projects arranged for a series of video visits and held several working conferences The result of this work is a broad ranging tale the aspirations of teachers and administrators to move the machinery of schooling in the direction of more authentic and engaging tasks the puzzlement of students when they realize that the assignments are real and that the teacher may not have a right answer in mind and the tensions between ivory tower ideas and everyday classroom practice Divided into four sections this research volume provides a historical perspective develops the conceptual framework that serves as a background for many activities described throughout and discusses numerous practical issues that confront today's researchers and practitioners views the phenomenon of writing portfolios through a variety of broadview lenses such as teacher enthusiasm student reflection assessment tension the portfolio as metaphor and the locus of control conveys important conceptual issues with a balance toward pragmatics and offers unique insights from the perspective of one individual who serves as scholar researcher and teacher

The Interdependence of Teaching and Learning Bryant Griffith, Douglas J. Loveless, 2013-03-01 The varied chapters of this book seek to capture the complexities of teaching and learning in today's schools and they share an interest in exploring the influences of knowledge construction in the moment and over time Teaching and learning are human processes interrelated and dynamic We assembled this collection to unpack what it means to teach and to learn teasing out some of the implications and challenges of such complicated educational processes that are often misconstrued as causal or linear As educators currently residing in the United States we find this a particularly pressing agenda given the current focus on common core standards and reducing teaching and learning to conceptual and pedagogical step by step procedures Our primary concern in putting together this book was to provide a conceptual and political foundation from which to construct and defend understandings and practices of teaching and learning that embody the complexity of educational endeavors and relationships The isolation of teaching from learning and the othering of both teachers and students one from the other suggests that knowledge is synonymous with information This book challenges such assumptions The project underlying this text can be seen as a means of rethinking how teachers and students perspectives of practice and curriculum influence what learning opportunities are provided to students Chapters written by established and new thinkers in the field of education demonstrate the ways in which teachers reformulate relationships between teaching and learning in school settings Our second objective is to examine local constructions of knowledge over time and how those constructions are consequential for teacher and student learning By examining patterns of practice and processes of knowledge construction in elementary secondary and undergraduate classrooms the authors of these chapters lay a foundation for examining commonalities and differences in the construction of knowledge and practices across educational levels disciplines and in school and out of school settings
