Pharmacy Ethics Robert Veatch, Amy Haddad, 2010-04-10 Pharmacists face ethical choices constantly sometimes dramatic life and death decisions but more often subtle less conspicuous choices that are nonetheless important. Among the topics confronted are assisted suicide conscientious refusal pain management equitable distribution of drug resources within institutions and managed care plans confidentiality and alternative and non traditional therapies. Veatch and Haddad's book first published in 1999 was the first collection of case studies based on the real experiences of practicing pharmacists for use as a teaching tool for pharmacy students. The second edition accounts for the many changes in pharmacy since 1999.

including assisted suicide in Oregon the purchasing of less expensive drugs from Canada and the influence of managed care on prescriptions The presentation of some cases is shortened most are revised and updated and two new chapters have been added The first new chapter presents a new model for analyzing cases while the second focuses on the ethics of new drug distribution systems for example hospitals where pharmacists are forced to choose drugs based on cost effectiveness and internet based pharmacies

Thermodynamics of Pharmaceutical Systems Kenneth A. Connors, 2003-03-19 Studies of thermodynamics often fail to demonstrate how the mathematical intricacies of the subject relate to practical laboratory applications Thermodynamics of Pharmaceutical Systems makes these connections clear emphasizing specific applications to pharmaceutical systems in a study created specifically for contemporary curriculums at colleges of pharmacy Students investigating drug discovery drug delivery and drug action will benefit from Kenneth Connors's authoritative treatment of the fundamentals of thermodynamics as well as his attention to drug molecules and experimental considerations An extensive appendix that reviews the mathematics needed to master the pharmacy curriculum proves an invaluable reference Connors divides his one of a kind text into three sections Basic Thermodynamics Thermodynamics of Physical Processes and Thermodynamics of Chemical Processes chapters include Energy and the First Law of Thermodynamics The Entropy Concept Phase Transformations Solubility Acid Base Equilibria Noncovalent Binding Equilibria Thermodynamics need not be a mystery nor be confined to the realm of mathematical theory Thermodynamics of Pharmaceutical Systems introduces students of pharmacy to the profound thermodynamic applications in the laboratory while also serving as a handy resource for practicing researchers
