Remote Sensing Image Analysis Including The Spatial Domain Remote Sensing And Digital Image Processing:

Remote Sensing Image Analysis: Including the Spatial Domain Steven M. de Jong,Freek D. van der Meer,2007-07-26 Remote Sensing image analysis is mostly done using only spectral information on a pixel by pixel basis Information captured in neighbouring cells or information about patterns surrounding the pixel of interest often provides useful supplementary information This book presents a wide range of innovative and advanced image processing methods for including spatial information captured by neighbouring pixels in remotely sensed images to improve image interpretation or image classification Presented methods include different types of variogram analysis various methods for texture quantification smart kernel operators pattern recognition techniques image segmentation methods sub pixel methods wavelets and advanced spectral mixture analysis techniques Apart from explaining the working methods in detail a wide range of applications is presented covering land cover and land use mapping environmental applications such as heavy metal pollution urban mapping and geological applications to detect hydrocarbon seeps The book is meant for professionals PhD students and graduates who use remote sensing image analysis image interpretation and image classification in their work related to disciplines such as geography geology botany ecology forestry cartography soil science engineering and urban and regional planning

Remote Sensing Digital Image Analysis John A. Richards,2012-09-09 Remote Sensing Digital Image Analysis provides the non specialist with a treatment of the quantitative analysis of satellite and aircraft derived remotely sensed data Since the first edition of the book there have been significant developments in the algorithms used for the processing and analysis of remote sensing imagery nevertheless many of the fundamentals have substantially remained the same This new edition presents material that has retained value since those early days along with new techniques that can be incorporated into an operational framework for the analysis of remote sensing data The book is designed as a teaching text for the senior undergraduate and postgraduate student and as a fundamental treatment for those engaged in research using digital image processing in remote sensing The presentation level is for the mathematical non specialist Since the very great number of operational users of remote sensing come from the earth sciences communities the text is pitched at a level commensurate with their background Each chapter covers a different aspect of the analysis of digital remotely sensed data without an excessively detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations Problems conclude each chapter

Advances in Visual Computing Richard Boyle,Bahram Parvin,Darko Koracin,Fatih Porikli,Jörg Peters,James Klosowski,Laura Arns,Yu Ka Chun,Theresa-Marie Rhyne,Laura Monroe,2008-12-03 It is with great pleasure that we present the proceedings of the 4th International Symposium on Visual Computing ISVC 2008 in Las Vegas Nevada ISVC offers a common umbrella for the four main areas of visual computing including vision graphics visualization and virtual reality Its goal is to provide a forum for researchers scientists engineers and practitioners throughout the world to present their latest research findings ideas developments and

applications in the broader area of visual computing This year ISVC grew significantly the program consisted of 15 oral sessions 1 poster session 8 special tracks and 6 keynote presentations The response to the call for papers was very strong we received over 340 submissions for the main symposium from which we accepted 102 papers for oral presentation and 70 papers for poster presentation Special track papers were solicited separately through the Organizing and Program Committees of each track A total of 56 papers were accepted for oral presentation and 8 papers for poster presentation in the special tracks All papers were reviewed with an emphasis on potential to contribute to the state of the art in the field Selection criteria included accuracy and originality of ideas clarity and significance of results and presentation quality The review process was quite rigorous involving two to three independent blind reviews followed by several days of discussion During the discussion period we tried to correct anomalies and errors that might have existed in the initial reviews

Remote

Sensing Digital Image Analysis John Alan Richards, 1993 Remote Sensing Digital Image Analysis provides the non specialist with an introduction to quantitative evaluation of satellite and aircraft derived remotely retrieved data Each chapter covers the pros and cons of digital remotely sensed data without detailed mathematical treatment of computer based algorithms but in a manner conducive to an understanding of their capabilities and limitations Problems conclude each chapter This fourth edition has been developed to reflect the changes that have occurred in this area over the past several years Its focus is on those procedures that seem now to have become part of the set of tools regularly used to perform thematic mapping As with previous revisions the fundamental material has been preserved in its original form because of its tutorial value its style has been revised in places and it has been supplemented if newer aspects have emerged in the time since the third edition appeared It still meets however the needs of the senior student and practitioner Book jacket
