INTRODUCTION

As we consider applications of remote sensing, it is helpful to recognize that the intelligent management of resources entails three phases: (1) *inventory*—determining the quantity and quality of each resource in each portion of the area that is to be managed; (2) *analysis*—developing a plan based on this inventory, whereby each resource available in the area can be manipulated to provide maximum benefit; and (3) *operation*—the day-to-day implementation of the management plan. The objective of this chapter is to demonstrate, through specific examples, that aerial photographs and other remote-sensing data can be of benefit in each of these phases.

CULTIVATED CROPS

Despite the valiant efforts that reporting agencies have made from time to time to acquire information on crop acreages, whether from questionnaires sent to farmers or from direct on-the-ground surveys, it is often uncertain whether a satisfactory estimate has been obtained. Returns from the questionnaires have often been too few, too inaccurate, or too late. Returns from direct on-the-ground surveys, because of
