The volume reviews new data about risk factors for the disease profiles the new staging system for renal cell carcinoma. RCC highlights our current understanding of familial syndromes of RCC and their molecular genetics and provides new perspectives about imaging of renal tumors. For localized disease a greater appreciation

of nephron sparing approaches and the importance of preservation of renal function is discussed in detail Advances in surgical techniques are highlighted For metastatic disease the molecular biology of kidney cancer is reviewed in a concise and understandable manner including the data that has fostered novel targeted approaches that have revolutionized management The several landmark phase III targeted therapy trials published in the last few years are placed in context with respect to current management Integration of surgery and systemic therapy through cytoreductive and consolidative approaches has yielded provocative data that promises to further advance the field and major advances in this domain are also be discussed *Renal Cell Carcinoma* Brian I. Rini, Steven C. Campbell, 2009 Edited and written by medical oncologists and surgeons this new reference covers all aspects of renal cell cancer from pathology and molecular genetics onto diagnosis screening and imaging Includes all the latest on management and treatment from medical and immunotherapy through to surgical procedures Covers future therapeutics and supportive care The bulk of the chapters deal with practical management of the continuum of kidney cancer ranging from the small renal mass to the metastatic patient Different treatment approaches are discussed within the context of each of these clinical scenarios and surgical and therapeutic advances are highlighted In addition special populations such as patients requiring palliative care those with brain or bone metastasis and those with inherited renal cell carcinoma are discussed

**Renal Cell Carcinoma** Ronald M. Bukowski, Andrew Novick, 2000-04-10 Renal cell carcinoma represents a heterogeneous group of tumors the most common of which is clear cell adenocarcinoma The annual incidence of this tumor appears to be rising and approximately 12 000 individuals die from this cancer annually in the United States One third of patients who present have metastatic disease at the time of diagnosis and another 40% who undergo nephrectomy will ultimately develop this complication Over the past 10 years a significant amount of new information concerning the epidemiology molecular and immunologic characteristics and therapy for patients with these tumors has appeared The recognition that inherited forms of renal cancer exist and that chromosomal abnormalities can be identified in these tumors suggested a genetic basis for renal cell carcinoma The familial cancer syndrome Von Hippel Lindau disease provided the setting in which the genetic abnormalities associated with the development of renal cancer were first described Abnormalities of the VHL gene have also been detected in sporadic clear cell carcinoma and it has now been recognized that approximately 80 % of these tumors will demonstrate characteristic alterations Currently the functions of the VHL protein are being investigated and the biology of clear cell carcinoma of the kidney is under study Additionally papillary carcinomas of the kidney appear to express different molecular defects and these are now being unraveled

**Imaging of Kidney Cancer** Ali Guermazi, 2005-10-05 This is one of the first books to deal specifically with diagnostic imaging of the entire spectrum of kidney cancers Both new and conventional imaging modalities are fully considered After an introductory chapter on the histopathological classification of kidney cancers the advantages and disadvantages of the various imaging modalities used in the diagnosis and assessment of disease extension are documented Subsequent chapters offer an

exhaustive description of the radiological features of the different histological subtypes of kidney cancer with radiological and histological illustrations and tables The latest innovations in interventional and minimally invasive procedures are also well covered The book benefits from carefully chosen and technically excellent images Each of the 24 chapters is written by an internationally acclaimed expert making this book the most current and complete treatment of the subject available It should be of great interest to radiologists oncologists and urologists Incidental Finding Cynthia Chauhan, John C.
